1. Introduction

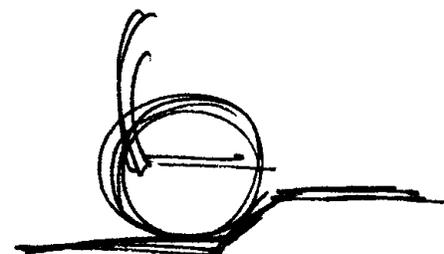

On behalf of the Alberta SCI Solutions Alliance, the Alberta Paraplegic Foundation commissioned the Faculty of Environmental Design, University of Calgary to undertake this Study in the spring of 2010. The purpose was to develop a snapshot of the current state of work on visitability across the US, Australia, Great Britain, and Canada as a first step towards the development of an implementation framework for increasing visitability within the Canadian, and more specifically Alberta context. The Study identified community best practices regarding visitability and the enhancement of accessible communities in order to provide realistic and practical approaches to help bring forward visitability into the public realm.

The first part of the Study consisted of an environmental scan which reviewed current academic research, legislation, and case study projects on visitability across the US, Australia, Great Britain, and Canada. During the summer of 2010, the research team compiled and reviewed over 356 individual research reports, pieces of legislation, and case study precedents on visitability. These documents were catalogued in a database for future access and use.

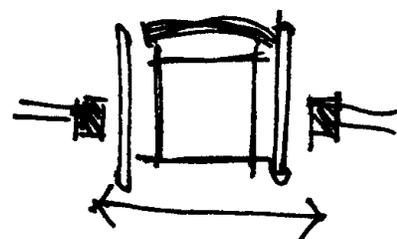

In the second part of the study, undertaken in the fall of 2010, the research team analyzed the results of the environmental scan and identified the key strategies to consider when incorporating visitability within the Alberta housing industry. The team assembled this work in three areas – Education, Legislation, and Implementation.

The Study concludes with a set of five practical recommendations drawn from these strategies to help direct the development of a strategy for increasing visitability within Alberta.

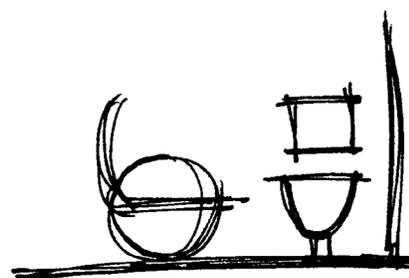

The Three Components of Visitability in a Housing Context

zero step entrance

81cm (31 3/4") passage space for hallways and doors

accessible half bathroom on main floor

1. Introduction

Defining Visitability

Developing a basic understanding of the context of visitability within the housing industry was not within the scope of work for this Study. However, it is important that the Study contain a basic introduction to the topic for readers who are new to the concept. The following has been excerpted from the website for Concrete Change, perhaps the most significant visitability organization in the United States.

Visit – ability (inclusive home design)

Visitability is a movement to change home construction practices so that virtually all new homes—not merely those custom-built for occupants who currently have disabilities—offer a few specific features making the home easier for mobility-impaired people to live in and visit. Several people have asked for a more detailed definition, noting that the list of required features has not been identical in all visitability-type legislation, handouts and other materials.

Spirit

First, the spirit of visitability is as important as the list of features. That spirit says it's not just unwise, but unacceptable that new homes continue to be built with gross barriers—given how easy it is to build basic access in the great majority of new homes, and given the harsh effects major barriers have on so many people's lives. These easily-avoided barriers cause daily drudgery; unsafe living conditions; social isolation; and forced institutionalization. The appropriate ways to further basic access are many: disseminating information; working to pass legislation; incentives (so long as they are moderate and don't decimate a tax base, impede general affordable housing, or undermine other visitability efforts); voluntary efforts (so long as they are not programs producing few houses and at the same time forestalling legislation); street theater; advertising campaigns; civil disobedience; and others.

Features

Second, the features list must be partly rigid and partly flexible. The inflexible features are:

- *At least one zero-step entrance approached by an accessible route on a firm surface no steeper than 1:12, proceeding from a driveway or public sidewalk*
- *Wide passage doors*
- *At least a half bath/powder room on the main floor*

No arguments are accepted that “We'll build the house so a ramp could be added later.” At least a half bath on the main floor now belongs as a non-negotiable feature, but it did not when the first visitability legislation was passed in Atlanta in 1992. At that early time in the movement's history, and in the absence of precedents, passing a bill with a zero-step entrance and door width requirements in private, single-family houses was just barely possible even without the bathroom requirement. Advocates balanced the obvious need for a main floor bathroom with the law of averages that nearly all new dwellings already include that feature.

Several additional features are sometimes included in visitability initiatives (for example, reinforcement in bathroom walls and accessible placement of electrical controls.) If very low cost, they are good and appropriate. However, these additions must be flexible according to circumstance because they are so much less essential for survival than the three basic features.

1. Introduction

Each added feature elicits a set of objections and/or misconceptions to be addressed. If the strategy chosen involves enforceable legislation —which is the means by which the great majority of Visitable homes have been created to date—the list of prioritized features must be short. Otherwise, passing a visitability law is currently impossible.

In voluntary efforts, more features can be included. For instance, they might require, besides the basics, also a full bathroom with designated maneuvering space and a bedroom on the main floor.

Scope

If people add to their personal definition of visitability advanced features such as a five-foot turning diameter in bathrooms, parking space requirements, a roll-in shower and so on, they are going beyond the scope of what is currently possible for rapid, broad application of visitability, and we discourage use of the term visitability for their initiatives. We are not averse to pushing for those advanced features per se, to the extent that they do not pose a credible threat to general housing affordability. Rather, we are against using the term visitability for additional features because it works against the reason the movement has had some success—its extreme simplicity of content, rigorous prioritization, and insistence on application not just cogitation, speculative homes not special homes.

http://www.concretechange.org/visitability_defined.aspx

2. Methodology

Geographic Context

The Environmental Scan included work on visitability in the United States, the United Kingdom, Australia, and Canada

The development of a strategy for increasing visitability in Alberta's housing industry began with an environmental scan of the discipline to better understand the successes and lessons learned in other jurisdictions. The scan focused on the current and past work done in the United States, the United Kingdom, and Canada. Additional information was collected from several other countries including Australia.

The United States was selected as an area of study because of the history of visitability advocacy and the more recent rise of visitability legislation in various parts of the country. The similarities between the market based housing industries of Canada and the United States make these precedents particularly significant.

The United Kingdom was selected as an area of study for the Environmental Scan because of the 12 year history of nationwide visitability legislation. The public nature of much of the British housing industry is very different from the situation in Canada where most houses are privately owned and limits the direct applicability of legislative precedents.

However, the long history of implementation provides valuable precedent studies as well as extensive data collection about market acceptance and construction costs that are comparatively very useful.

Canada was included as an area of study for obvious reasons. Although visitability in Canada is still in its infancy, there are some legislative and case study precedents in Ontario and Manitoba that have a direct bearing on the Alberta context.

A small amount of investigation was conducted in Norway because of similarities in climate and in Australia because of the similarities to the Canadian situation in terms of both legislative framework and the market driven nature of the housing industry. Finally, several reports were collected that reviewed the global situation for visitability in Brazil, Denmark, Finland, Greece, Italy, Japan, New Zealand, Norway, Romania, and Sweden.

2. Methodology

Areas of Investigation

The Environmental Scan included three areas of study: Academic Research, Legislative Contexts, and Current Practices

Within this geographic context, the second step in executing the environmental scan was to develop an investigative structure that would assemble the information that was most pertinent and useful for the Alberta context. Three areas of study were selected: Academic Research, Regulatory Context, and Current Practices.

Academic Research

The investigation into Academic Research formed the backbone of the Environmental Scan. As the technical elements of visitability are already well established, academic research in the area tends to focus less on original first principle investigations and more on critical evaluations of policy, market receptivity studies, case study analyses, as well as more broadly based work on the implications of visitability within a larger cultural context.

As such, the Academic Research component of the Environmental Scan provided critical insights into the foundational nature of visitability activities that directed the broad development of the conclusions and recommendations in the Study.

Documents pertaining to Academic Research were compiled in three topic areas – Context, Case Study Analysis, and Implementation Analysis.

Context contains academic papers and research projects examining the history and theory of visitability. The relationship of visitability to broader accessibility agendas such as universal design and aging in place are covered in the parallel initiatives subcategory.

Case Study Analysis consists of academic research critically analyzing projects that have implemented visitability standards. This work is subcategorized by project type into retrofitted houses and new housing.

2. Methodology

Implementation Analysis examines academic research that studies the implementation of visitability standards. This has been further subdivided into work that analyses the reaction to visitability implementation from a consumer, regulatory, and construction industry point of view.

Legislative Context

The investigation into the Legislative Context provided substantial insight into the state of implementation of visitability policy across the geographic study area. Although a large number of instances were identified in which visitability legislation had been implemented, the political context varied so widely between jurisdictions that caution must be exercised when drawing conclusions for the Alberta situation. Nevertheless, the environmental scan revealed a great deal of interest in, and direct implementation of, regulations and legislations pertaining to visitability.

Documents pertaining to the Regulatory Context were compiled in two areas – visitability Specific and Broader Initiatives.

This has been further subdivided into Statutory and Non-Statutory Legislation.

Statutory deals with regulations confirmed in formal legislation at a municipal, state, provincial, or national level.

Non-statutory deals with regulations conferred through guidelines, protocols, and programs. These areas are further subcategorized into visitability specific regulations and broader regulatory frameworks in which visitability criteria are embedded.

Academic Research

- 1. Context**
 - a. History
 - b. Theory
 - c. Parallel Initiatives
- 2. Case Study Analysis**
 - a. Retrofitted projects
 - b. New projects
- 3. Implementation Analysis**
 - a. Consumer experience
 - b. Regulatory experience
 - c. Industry experience

Legislative Context

- 1. Visitability Specific**
 - a. Statutory
 - b. Non-statutory
- 2. Broader Initiatives**
 - a. Statutory
 - b. Non-statutory

2. Methodology

Current Practices

The investigation into Current Practices examines the critical state of 'visitability on the Ground' across the geographic regions under consideration. Although some of these situations are the direct manifestation or result of legislative frameworks, the majority are more speculative and experimental attempts to increase awareness of visitability standards amongst consumers, industry, and legislators. Augmenting the realization of physical projects was a significant amount of work in developing broader educational initiatives to promote visitability.

Documents pertaining to Current Practices and Precedents were compiled in three topic areas.

Experimental Projects are typically one-off prototyping projects intended to introduce visitability to a particular community.

Implemented Projects are more main stream projects usually implemented by a nonprofit agency or for profit builder. Both project types are subcategorized into either subsidized or market housing. It is significant to note that the majority of precedent projects found to date are in the subsidized housing category.

Educational Initiatives are a critical component of the landscape of current practices and precedents as either a substitute for, or a precursor to, the actual construction of a project that meets visitability standards.

This area was subcategorized into the primary Academic and Non-Profit Organizations that promote a visitability agenda, specific Education programs aimed at raising awareness about visitability to building industry members, and to a lesser degree, legislators and the general public.

Current Practices

- 1. Experimental Projects**
 - a. Subsidized Housing
 - b. Market Housing
- 2. Implemented Projects**
 - a. Subsidized Housing
 - b. Market Housing
- 3. Education Initiatives**
 - a. Organizations
 - b. Programs
 - c. Awards and Incentives
 - d. Conferences and Exhibitions

Awards and Incentives contain examples of recognition programs that have been devised to raise awareness and promote compliance with visitability standards. Finally, the conferences and exhibitions subcategory contains a record of past, present, and future events focused on the visitability agenda.

A total of 356 documents were collected during the environmental scan. A summary of these findings, collated according to the structure noted in the Environmental Scan, can be found in the Appendix to this Study. The results are also available for query in the web based visitability database.

Our analysis of the documentation collected for the environmental scan resulted in the development of a series of key findings in each of the three main categories. These serve as important guidelines for the future development of an Alberta based visitability program.

3. Key Findings — Academic Research

1. Visitability improves Quality of Life

Visitability improves the quality of lives of persons with disabilities and their families by fostering social inclusion, decreasing fears of accidents, and diminishing the divide between public and private spheres. Human models of need include the desire of the human spirit for: retaining dignity, minimizing barriers to independence, preserving elements of choice, and being able to take part in society. The social model of disability proposes that systemic barriers, negative attitudes and exclusion by society are the ultimate factors defining who has a disability. Individual physical or intellectual variations only lead to disability when framed as such by society. The model does not deny that some individual differences lead to individual limitations or impairments, but rather that these are not the cause of individuals being excluded. The origins of the approach can be traced to the 1960s and the disabled people's Civil Rights Movement/human rights movements; the specific term itself emerged from the United Kingdom in the 1980s.

3. Key Findings — Academic Research

2. Visitability Connects with Aging in Place and Multi-Generational Planning Agendas

Current data indicates that there will be a significant spike in senior populations - an estimated 89 million by 2050(US). Visitability can have an effect on the ability for these seniors to live a healthy life within their homes and community. The standards of a zero step entry, wide halls and doorways, and a main level bathroom that allow visitability to a home also enables aging homeowners to remain in their house for a longer period of time.

Additionally, although to a somewhat lesser degree, visitability standards help decrease fall hazards in senior's homes. An estimated 1.8 million falls amongst seniors led to an emergency room visit in 2000. The direct cost of these falls was estimated at \$16.4 billion, or an average of \$9,400 per fall. The data shows that the elimination of raised entry tripping hazards reduces the number and severity of these falls and home injuries.

Visitability legislation, when combined with 'aging-in-place' strategies, supports the idea of livable communities. Everyone in the community benefits when there are inclusive housing developments that allow for a diverse range of social groups.

3. Key Findings — Academic Research

3. Lack of Consumer Awareness is an Implementation Barrier in Market Housing

The technical requirements for making a house visitable are not prohibitive, particularly in new construction. Academic research indicates that the majority of the resistances to implementation are socially based. As a result, data indicates that these can be overcome through increased awareness.

The research shows that there is a lack of awareness in all consumer age groups. There is little understanding about the simple changes that could be made at the time of construction versus retrofitting. There is also confusion about universal design as an infrastructure (wider doors, blocking in walls) and accessible products (walk-in bath tub). There is the perception by young to middle age consumers, who are ambulatory, that they are not concerned with visitability or aging-in-place issues because it doesn't relate to them directly. If they are healthy now and don't need it, why install it now, can't it be done later?

Socially based resistance to visitability can be overcome with increased awareness.

3. Key Findings — Academic Research

4. Misconceptions About Cost Are a Major Implementation Barrier

Many objections to visitability standards are concerned with increased costs. But in the decade since Part M's introduction in the UK, additional costs have been minimal. A 2003 study found builders divided on whether Part M regulations had significantly increased development costs. Over eighty percent indicated Part M features had no impact on the saleability of houses. Nevertheless the increased cost is hardest to accommodate in lower cost, smaller homes.

According to Lifetime Homes (LTH) research, implementing LTH standards during the design process increased costs by \$835 per dwelling. Interviews with American builders estimated the cost of visitability features was \$300 to \$400, mainly associated with zero-step entrances. Retrofitting visitability features is estimated at \$1700.

3. Key Findings — Academic Research

5. The Visitability Agenda in the United States is Driven Largely by Bottom Up Incremental Growth

The Visitability Agenda in the United States was propelled by the 1990 Americans with Disabilities Act (ADA). This Federal legislation created a proliferation of research and legislation literature on disability issues. There are also a large number of non-profit and lobbyist disability groups. ADA legislation applies to publicly funded housing projects and does not impact private housing developments.

Notwithstanding this Federal activity regarding the broader agenda of accessibility, the majority of work on visitability has been incremental, bottom up development driven by individual organizations and communities.

The specific ordinance that was passed in Atlanta, Georgia in 1992 was the catalyst for visitability legislation. Success on a local level supported research, reports and cost figures that helped fuel and support state law implementation. This legislation has diffused across the US in a

horizontal pattern (from city to city or state to state) as well as a in a vertical pattern (from state authority down to city authority and vice versa).

Two specific case studies Irvine, California and Bolingbrook, Illinois describe the strategies (voluntary, mandatory, incentives), challenges and effectiveness of implementation and compliance with visitability legislation.

Individual organizations and communities undertake the majority of visitability projects in the US.

3. Key Findings — Academic Research

3. Key Findings — Academic Research

6. The Visitability Agenda in the United Kingdom is Well Advanced and Driven Largely by Top Down Legislation

The majority of the housing built in the United Kingdom is publicly funded and the adoption of accessibility standards into the building code (through Part M) made visitability a standard design component. Part M of the UK's building regulations was implemented in 1999, requiring all newly built public buildings and private dwellings to meet 'visitability' criteria. The Part M requirements include: - 900 mm wide level/ramped approach; an accessible threshold; a minimum 775 mm entrance door, a toilet in the entrance storey, wide corridors and hallways in the entrance storey, no changes of level in the entrance storey, and switches and sockets between 450 mm and 1200 mm above the floor. Part M regulations have been easily incorporated into the UK housing industry with minimal problems or interruptions.

The Lifetime homes (LTH) concept was developed in 1991 and incorporates sixteen design criteria intended to make housing flexible enough to respond to an individual's changing needs over a

life time. LTH are part of the UK's voluntary "Code for Sustainable Buildings". LTH use wheelchair accessibility as the benchmark for good space requirements, which help most people in a variety of ways, not just wheelchair users. Parents with small children, people carrying shopping or other large items, older people who find it easier not to use stairs, people with a range of temporary or permanent mobility impairments, all benefit from Lifetime Homes standards.

The concept of Lifetime Homes is proposed as a more inclusive, less stigmatizing approach that has the potential to render the concept of 'special needs' obsolete. It is the goal of the United Kingdom government to implement LTH requirements to all new dwellings by 2013.

Visitability in the UK has been mandated as a standard design component since 1999.

3. Key Findings — Academic Research

Selected References:

Lifetime Homes

The concept of Lifetime Homes was developed in the early 1990s by a group of UK housing experts. Lifetime Homes are ordinary homes incorporating 16 Design Criteria that can be universally applied to new homes at minimal cost. All public sector funded housing in England will be built to the Lifetime Homes standard from 2011 (it is an existing requirement in Wales and Northern Ireland), with a target of 2013 for all private sector dwellings.

<http://visitability.wordpress.com/2010/05/26/lifetime-homes/>

Independent lives and the relevance of lifetime homes

The article provides a critique of LTH standards, and suggests that while they are, in some respects, a positive development, they are not, in and of themselves, a panacea in relation to rectifying the shortfall of accessible dwellings.

<http://visitability.wordpress.com/2010/05/26/independent-lives-andthe-relevance-of-lifetime-homes/>

Consumer and industry views of Lifetime Homes

“This research survey, conducted independently in 2000 by Consumers Association and Liz Wood Associates, is one of the first accounts of the desirability and acceptability of Lifetime Homes-style housing. The researchers interviewed 300 inhabitants in their own homes, and examined their views on each of the Lifetime Home design features. In addition, they sought the current views of the private sector builders, sales staff, letting agents and the new house building regulator to the Part M initiatives, and the professional response to the changing market and regulations.”

3. Key Findings — Academic Research

7. The Visitability Agenda in Australia and New Zealand is in an Early Development Stage

In Australia, adaptable housing design is covered under the standard AS 4299, which contains a checklist of 119 design and performance features. The accessibility of the new residential construction can be classified into 3 different classes of adaptability depending on which features are installed. Despite the fact that this is a country wide standard, implementation is at a local government authority level within each of the separate states. The standard is being implemented, but only in 49 of the 152 local government authorities that comprise the state of New South Wales.

It appears New Zealand does not have any legislation in place for residential home construction. The current practice is to provide funding for home modifications as needed on an individual basis. The government is aware of the significant unmet need for accessible housing and that funding for modifications would be less expensive or more strategic if accessible legislation was incorporated into new construction.

Housing and Disability: Future Proofing New Zealand Housing Stock for an Inclusive Society

CHRANZ has commissioned this research to assist the housing and disability sectors to optimize housing access for the growing number of people who will have moderate to severe physical and sensory disability that affects their mobility.

The research focuses on: the current housing experiences of physically disabled people, both young and old, the capacity of the housing market to respond to the rising demand for 'lifetime homes' and the opportunities to establish a housing stock that is future-proofed for those affected by challenges to their mobility and agility through moderate to severe physical disability and aging.

8. The Visitability Agenda in Canada is Currently Most Active in Ontario

Provincial and municipal visitability initiatives across Canada are sporadic and generally voluntary. Canada has no federal visitability initiatives, although a national accessible housing act, Bill C-304, is currently under debate in Parliament. In the fall of 2010, Ontario passed the final Accessible Built Environment Standard, which includes visitability features. Several Municipalities across Canada, like Saanich and Winnipeg, have voluntary visitability guidelines. One of the first visitable houses in Canada was built in spring 2007, when Architects Without Borders and Habitat for Humanity Winnipeg partnered to design and build a visitable house for a lower income family.

Comparison of Ontario's Initial Proposed and Final Proposed Accessible Built Environment Standard

The Accessibility for Ontarians with Disabilities Act, 2005 (AODA), is a law passed by the Ontario legislature that allows the government to develop specific standards of accessibility.

<http://visitability.wordpress.com/2010/11/23/comparison-of-ontarios-initial-proposed-and-final-proposed-accessible-built-environment-standard/>

In May 2011, a motion was introduced in the Alberta Legislature to increase visitability and accessibility within Alberta's homes.

3. Key Findings — Academic Research

Voluntary Design Guidelines for Adaptable Housing

The Voluntary Design Guidelines for Ground-Oriented Housing suggest features that would provide better adaptability and accessibility in single family and townhouses beyond that required by the BC Building Code and Saanich's Basic Adaptable Housing requirements. Use of the guidelines is voluntary.

<http://visability.wordpress.com/2010/06/10/voluntary-design-guidelines-for-adaptable-housing/>

Habitat One [Winnipeg]

"A design team including students, interns, and professionals worked toward creating well-designed visitable housing solutions for lower income families in Winnipeg. The designs were presented to Habitat for consideration for construction in the spring of 2007. AWB then invited students, staff, and instructors at the Faculty of Architecture to participate in a Habitat for Humanity building blitz. Volunteers built the first 'visitable' Habitat house in Winnipeg."

<http://visability.wordpress.com/2010/06/30/habitat-one-winnipeg/>

MLA Cal Dallas to introduce a Motion to increase visitability and accessibility within Alberta's homes

"Cal Dallas, MLA for Red Deer – South, introduced a Motion during the spring session of the Legislature to increase visitability and accessibility within Alberta's homes... Motion 505 proposes to increase visitability standards in Alberta's homes by introducing incentives that would encourage people to implement these standards when constructing their new home."

<http://visability.wordpress.com/2011/03/11/mla-cal-dallas-to-introduce-a-motion-to-increase-visitability-and-accessibility-within-albertas-homes/>

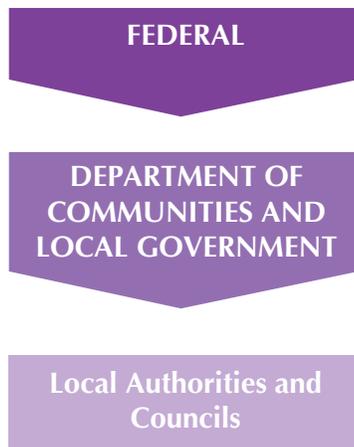

3. Key Findings — Legislative Context

1. United Kingdom

1999 Part M regulation mandated all new residential construction in England and Wales be visitable.

150,000 visitable homes are built annually.

The Lifetime Homes/Code for Sustainable Homes looks to expand visitability requirements into universal design.

Government/Legislative Hierarchy

UK Federal Building Regulations apply to most new buildings and many alterations of existing buildings in England and Wales, whether domestic, commercial or industrial. Building Regulations are made under powers provided in the Building Act 1984. Compliance with the Building Regulations is enforced by the local Building Control Bodies.

The Building Regulations’ requirements are divided into fourteen technical parts that are detailed in Approved Documents, including “Approved Document M - Access to and Use of Buildings”.

3. Key Findings — Legislative Context

Trends and Features Analysis

In 1999, the Part M regulation introduced standard visitability requirements (and beyond) into all new residential construction in England and Wales. As a result, approximately 150,000 new visitable dwellings are built each year.

The Lifetime Homes/Code for Sustainable Homes looks to expand visitability requirements towards universal design by including the following additional criteria into Part L of the Building Regulations:

- Minimal distance from the car parking space to the home
- Illuminated and covered entrances
- Wheelchair turning space in dining areas and livingrooms
- Entrance level living room;
- Space on the entrance level that could be used as a bed-space
- Entrance level WC drainage provision enabling a shower to be fitted to be fitted
- Bathroom walls capable of taking adaptations such as handrails
- Design should incorporate
 - a) provision of a stair lift
 - b) identified space for a lift
- Route for a potential hoist from a main bedroom to the bathroom. The bathroom - Ease of access to the bath, toilet, and wash basin.
- Living room window glazing should begin at 800mm or lower

Key Documents

Part M Legislation

Part M Legislation document, the section of the UK's building code that covers dwellings and accessibility.

<http://visitability.wordpress.com/2010/06/10/approved-documentm-access-to-and-use-of-buildingsuk-government/>

Code for Sustainable Homes

"Lifetime Homes concept is incorporated under the "Health and Wellness" criteria within the UK's Code for Sustainable Homes. The Lifetime Homes 16 design criteria aim to produce homes that are accessible to a wide range of occupants and able to be easily adapted to meet the changing needs of a household. "

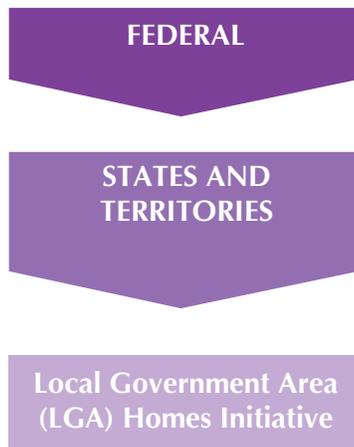

<http://visitability.wordpress.com/2010/06/10/code-for-sustainablehomesuk-government-communities-and-local-government/>

3. Key Findings — Legislative Context

2. Australia

The State of Victoria is currently undergoing a Regulatory Impact Assessment for mandating standard visitability features in all newly built dwellings.

Queenland's State government is incorporating visitability as part of a larger, voluntary sustainability program.

Government/Legislative Hierarchy

Like the United States and unlike the United Kingdom, Australia has a written National constitution. The Australian Constitution defines the responsibilities of the federal government, which include foreign relations, trade, defence and immigration. Governments of states and territories are responsible for all matters not assigned to the Commonwealth.

Australian State parliaments are subject to the Australian National Constitution as well as their state constitutions. A federal law overrides any state law not consistent with it.

3. Key Findings — Legislative Context

Trends and Features Analysis

All states and territories across Australia have taken various levels of action to increase the supply of accessible housing. A number of different model codes have been developed resulting in varying standards. Consistency and harmonization of legislation will be the next step.

The State of Victoria is exploring adding visitability criteria as a variation on the Building Code of Australia. Victoria is currently undergoing a Regulatory Impact Assessment for mandating standard visitability features in all newly built dwellings.

Echoing the UK's movement towards integrating visitability and sustainability, the Queensland State government is incorporating visitability as part of a larger, voluntary, Sustainable Homes initiative.

Key Documents

Visible and Adaptable Features in Housing Regulatory Impact Statement [Victoria, Australia]

A Regulatory Impact Statement (RIS) has been prepared to examine approaches to increase the supply of accessible housing in Victoria. Submissions have been sought on the content of the RIS which proposes a variation to the Building Code of Australia.

<http://visitability.wordpress.com/2010/06/10/584/>

Smart and Sustainable Homes Design Objectives [Queensland, Australia]

The Sustainable Homes program is providing communities throughout Queensland with display homes which incorporate principles of sustainable design and performance utilising the Smart & Sustainable Homes Design Objectives. The homes are unique because they provide practical examples within their regional climatic context of dwellings that aim to meet the triple bottom line concept of sustainability i.e. environmental, social and economic sustainability. Visitability criteria were part of each home design. Extensive drawings, photos, and floor plans are available for each project built under the sustainable homes program.

<http://visitability.wordpress.com/2010/06/11/smart-and-sustainablehomes-design-objectives-queensland-australia/>

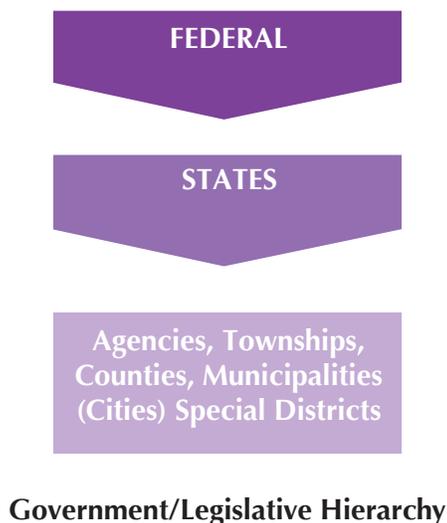

3. Key Findings — Legislative Context

3. United States

The majority of legislation follows the same written structure, legal language, and visitable features.

Most prescribe the three key components of visitability.

Extra requirements include: accessible environmental controls and electrical outlets.

At a federal level, the United States has the Constitution but no uniform common federal law. Each State has the power to make their own laws as long as they don't conflict with the Constitution.

Each state has its own constitution, government and courts. The state judicial branch applies, interprets and occasionally overturns both state statutes and regulations, as well as local ordinances. The state delegates lawmaking powers to Agencies, Townships, Counties, Cities and Special Districts.

These local authorities implement laws for the areas they have jurisdiction over. For example, if there is an ordinance made within a county, it affects every municipality and district within that county. If an ordinance is passed in a municipality, it affects only the municipality and not the county or neighboring municipalities.

3. Key Findings — Legislative Context

Trends and Features Analysis

The trend in the United States is to enact visitability legislation that is specific to housing construction projects that are subsidized by either federal, state or municipal funds. Out of 43 laws enacted and proposed there are only 10 that applied to all forms of housing.

It is believed that it is easier to enact visitability for subsidized housing because they are considered public, and should be accessible to all individuals. The diffusion of this law has been made easier because the Atlanta, Georgia ordinance opened the door.

The majority of the legislation that has been implemented follows the same written structure, legal language and visitable features. They prescribe the three key components of visitability: no-step entries off of accessible paths, an accessible path within the dwelling to rooms and a bathroom, a bathroom that is maneuverable by a wheelchair with blocking in the walls. In these codes, the dimensions for minimums and maximums are either explicitly stated, or they leave reference to a standard (ie: American National Standards Institute) or building code article.

In addition to these requirements, it is common that they prescribe all switches, environmental controls and electrical outlets to be in accessible locations. A few specify extra requirements like non-slip surfaces on accessible paths and lever door handles from doors on accessible paths.

Key Documents

Atlanta, Georgia Code of Ordinances – Division 1: Housing Code, Barrier Free Requirements Sec. 8-2181

This barrier free ordinance applies to new single-family dwellings, duplexes, and triplexes which receive city assistance.

<http://visitability.wordpress.com/2010/06/10/atlanta-georgia-codeof-ordinances-division-1-housing-code-barrier-free-requirementssec-8-2181/>

The Inclusive Home Design Act HR 1441

The Inclusive Home Design Act is based on the concept of visitability, the affordable, sustainable and inclusive design approach for integrating basic accessibility features into newly-built homes. Specifically, the legislation requires all newly-built single family homes receiving federal funds to meet visitability standards.

<http://visitability.wordpress.com/2010/06/10/the-inclusive-homedesign-act-hr-1441/>

Visitability Code, R-324 [Urbana, Illinois]

Visitability requirements for municipally subsidized housing in Urbana, Illinois.

<http://visitability.wordpress.com/2010/06/10/visitability-code-r-324-urbana-illinois/>

3. Key Findings — Legislative Context

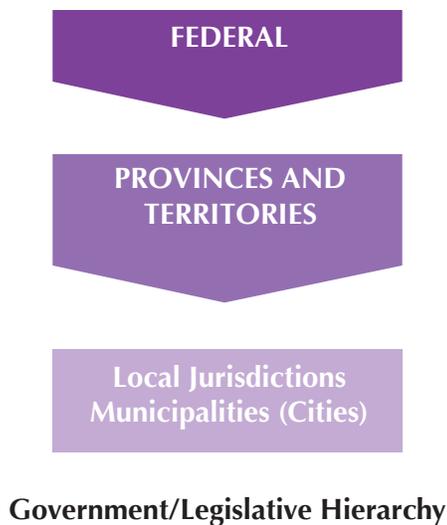

4. Canada

Bill C-304, A National Housing Strategy is currently under parliamentary debate that could mandate accessibility or visitability.

Provincial and municipal visitability initiatives across Canada are sporadic and generally voluntary.

Subsidized housing projects in Edmonton and Winnipeg incorporate visitability criteria.

Cal Dallas, MLA for Red Deer-South, is sponsoring a Motion which proposes to increase visitability and accessibility within Alberta's homes.

Canada also has the Constitution of Canada that stands as the over arching federal law, and all provincial and territorial law must be consistent with the Constitution. Canada has three federal human rights instruments: the Canadian Charter of Rights and Freedoms, the Canadian Human Rights Act and the Canadian Human Rights Commission but it doesn't have a universal act that addresses people with disabilities.

The provinces and territories have the ability to write their own laws, withstanding it is in line with the constitution. Some provinces have passed their own legislation to protect the rights of people with disabilities. The provinces as well adopt and amend the National Building Code to make their own province specific building code which could include provisions for accessibility.

3. Key Findings — Legislative Context

Each province and territory has legislation that empowers the municipalities within it, for example Alberta's Municipal Government Act. Municipalities have the ability to enact their own bylaws which are another form of authority. In addition to the provincial building code, there can be a specific set of building bylaws that address how the city wants their buildings to be within the municipality.

Trends and Features Analysis

Visitability initiatives across Canada, at both the provincial and municipal level, are both sporadic and generally voluntary. The Cities of Edmonton and Winnipeg have subsidized housing initiatives that incorporate visitability criteria, along with visitability guidelines for the general public. As subsidized housing constitutes only five percent of Canada's housing stock, visitability criteria needs to be applied to a larger pool of dwellings to have a significant impact. The Canada and Mortgage and Housing Corporation [CMHC] has a voluntary set of guidelines for FlexHousing, which include visitability features.

Federal

Bill C-304

Bill C-304 mandates a National Housing Strategy, and is currently under parliamentary debate. If passed, this bill will ensure the availability of accessible housing "for those with different needs, including, in an appropriate proportion, access for the elderly and the disabled that allows for independent living as a result of housing adaptations". Mandatory visitability requirements would have to be investigated and implemented on a national scale.

The Province of Ontario

The Ontario Human Rights Code, 1990

The Code was one of the first laws of its kind in Canada. It is a provincial law that gives everybody equal rights and opportunities without discrimination in specific areas such as jobs, housing and services. The Code's goal is to prevent discrimination and harassment.

Ontarians with Disabilities Act (ODA), 2001

The purpose of the ODA is to improve opportunities for people with disabilities through identification, removal and prevention of barriers to participation in the life of the province.

The new legislative requirements set out standards that all municipalities must follow to ensure that existing barriers for people with disabilities are removed over time and that no new barriers are created. Accessibility advisory committees shall be established in every municipality having a population of more than 10,000 may establish or continue an accessibility advisory committee.

Accessibility for Ontarians with Disabilities Act (AODA), 2005

The purpose of this act is to establish an accessibility standards advisory council, Ontario Human Rights Commission (OHRC). Its mandate is to advise the minister in developing, implementing and enforcing accessibility standards in order to achieve accessibility for Ontarians with disabilities by 2025.

3. Key Findings — Legislative Context

Accessible Built Environment Standards

The OHRC has proposed this standard for enactment. It specifies the three main visitability requirements for all multi-residential (rental apartments, condos, hotels) new construction with a phased plan to include retrofits.

Motion 505, Alberta Legislature

Motion 505 was introduced on May 9, 2011 in the Spring Session of the Alberta Legislature by Cal Dallas, MLA Red Deer South. The Motion urges the Government to utilize incentives to encourage visitability standards in all newly constructed single-family homes, including one zero-step entrance, wider doorways (minimum 32 inch clear door opening), and a main floor half bathroom.

Key Documents

An Act to ensure secure, adequate, accessible and affordable housing for Canadians

“An Act to ensure secure, adequate, accessible and affordable housing for Canadians. This bill mandates: (3) The national housing strategy shall include incentives for affordable rental housing and shall ensure the availability of housing that a) is safe, secure, adequate, affordable, accessible, and not-for-profit in the case of those who cannot otherwise afford it; (c) provides access for those with different needs, including, in an appropriate proportion, access for the elderly and the disabled that allows for independent living as a result of housing adaptations; (f) includes not-for-profit rental housing projects, mixed income not-for-profit housing cooperatives, special-needs housing and housing that allows senior citizens to remain in their homes as long as possible.”

<http://visitability.wordpress.com/2010/06/10/n-act-to-ensure-secureadequate-accessible-and-affordable-housing-for-canadians/>

The Ontario Human Rights Code

The Ontario Human Rights Code (the “Code”) is for everyone. It is a provincial law that gives everybody equal rights and opportunities without discrimination in specific areas such as jobs, housing and services

<http://visitability.wordpress.com/2010/06/10/the-ontario-humanrights-code/>

Ontarians with Disabilities Act (ODA), 2001

The purpose of the ODA is to improve opportunities for people with disabilities through identification, removal and prevention of barriers to participation in the life of the province. The new legislative requirements set out standards that all municipalities must follow to ensure that existing barriers for people with disabilities are removed over time and that no new barriers are created.

<http://visitability.wordpress.com/2010/06/10/ontarians-withdisabilities-act-oda-2001/>

Accessibility for Ontarians with Disabilities Act, 2005 [S.O. 2005, Chapter 11] Province of Ontario

The purpose of this Act is to benefit all Ontarians by developing, implementing and enforcing accessibility standards in order to achieve accessibility for Ontarians with disabilities with respect to goods, services, facilities, accommodation, employment, buildings, structures and premises.

<http://visitability.wordpress.com/2010/06/10/accessibility-forontarians-with-disabilities-act-2005-s-o-2005-chapter-11-provinceof-ontario/>

Initial Proposed Accessible Built Environment Standard

As required by the Accessibility for Ontarians with Disabilities Act, the Minister of Community and Social Services appointed a Standards Development Committee (SDC) to develop the proposed Accessible Built Environment (ABE) Standard. The Committee’s task is to: develop an initial proposed standard that will focus on the first five years, to be submitted to the Minister for public review; consider comments received during the public review, making any changes the committee considers advisable; and submit a final proposed standard to the Minister of Community and Social Services to enact into law.

<http://visitability.wordpress.com/2010/06/10/580/>

3. Key Findings — Current Practices

United Kingdom — Experimental

The UK's BRE Innovation Park is a demonstration project for sustainable practices and includes visitability as part of sustainability.

“The BRE Innovation Park is a world leading and ground breaking demonstration development designed to give a glimpse of how the future delivery of sustainable buildings and communities can be achieved not only in the UK but around the world. It features ten of the world's most sustainable houses (built to the Code for sustainable homes), a health centre of the future, a refurbished Victorian Terrace and over 400 different construction innovations and emerging technologies as well as a state of the art community landscape design. Collectively these projects demonstrate diverse and innovative approaches to sustainable design and construction. They each share the common goal of having a low impact on the environment but a high impact on the quality of life of building and community occupants and CO2 emissions reduction.”

<http://www.bre.co.uk/page.jsp?id=634>

A notable project in the BRE Innovation Park is the Barratt Green House.

Barratt Green House, UK

The first Code for Sustainable Homes Level 6 house built by a major homebuilder. The Barratt Green House is a three/four bedroom family house designed to provide a solution to the needs of low energy, high density volume housing of the future. It is a direct response to the government's target of zero carbon housing by 2016, and includes Lifetime Homes criteria.

<http://visitability.wordpress.com/2010/06/30/barratt-green-house-uk/>

3. Key Findings — Current Practices

United Kingdom — Implemented

Barratt Homes—one of the UK's largest home builders—is developing Hanham Hall, a community of 185 universally designed homes.

Barratt Homes - one of the UK's largest home builders - and the Homes and Communities Agency are creating England's first zero carbon development. This will be the first development by a major house builder to meet the Code for Sustainable Homes Level 6, which includes Lifetime Homes standards.

Hanham Hall, a former hospital site owned by the Homes and Communities Agency, the national housing and regeneration agency, is part of the Carbon Challenge, a government programme that intends to create a number of zero carbon housing developments across the country. The development will deliver 185 new homes in an attractive and sustainable environment.

<http://visitability.wordpress.com/2010/06/30/hanham-hall-zero-carbon-village/>

3. Key Findings — Current Practices

Australia — Experimental

The Sustainable Homes Program in Queensland, Australia, is a program that provides support for demonstration homes and also integrates visitability and sustainability.

“The Sustainable Homes program is providing communities throughout Queensland with display homes which incorporate principles of sustainable design and performance utilising the Smart & Sustainable Homes Design Objectives. The homes are unique because they provide practical examples within their regional climatic context of dwellings that aim to meet the triple bottom line concept of sustainability i.e. environmental, social and economic sustainability.”

<http://visitability.wordpress.com/2010/06/29/smart-sustainable-homes-program/>

3. Key Findings — Current Practices

United States — Experimental

Habitat for Humanity is an active partner in creating visitable demonstration projects throughout the United States.

Atlanta's Habitat for Humanity spurred the US visitability movement by building twenty zero-step homes in 1992. It worked in conjunction with Concrete Change.

<http://visitability.wordpress.com/2010/05/25/concrete-change-every-new-home-visitable/>

3. Key Findings — Current Practices

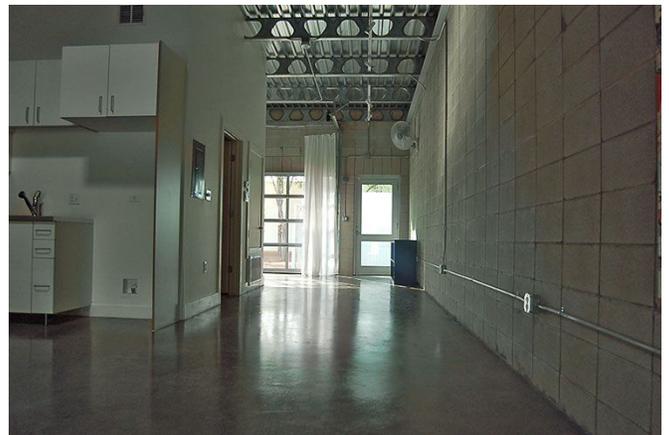

United States — Implemented

Visitability legislation has created a large body of visitable housing stock, including suburban homes and pre-fabricated housing.

Cobra Studios [SMART Housing, Austin, Texas]

The Cobra Studios development is a participant in Austin's S.M.A.R.T.[™] (Safe, Mixed Income, Accessible, Reasonably Priced and Transit Oriented) Initiative.

<http://visitability.wordpress.com/2010/06/29/cobra-studios-smart-housing-austin-texas/>

3. Key Findings — Current Practices

United States — Implemented

FabCab

“FabCab Provides Homes for Better Living. Our expertise draws from years of following changing age demographics and our passion for designing homes that enable people to thrive regardless of their age or ability. We weave Universal Design principles into everything we do and we are dedicated to designing friendly, inspiring spaces for people to live their active lifestyles in. FabCab designs and sells pre-fabricated and kit-built environmentally-friendly homes and accessory dwelling units (ADUs). We strive to lead the market specializing in design for all ages and environmentally sustainable design by providing clients eco-friendly and universally designed cabins that support healthy lifestyles.”

<http://visitability.wordpress.com/2010/06/29/fabcab/>

3. Key Findings – Current Practices

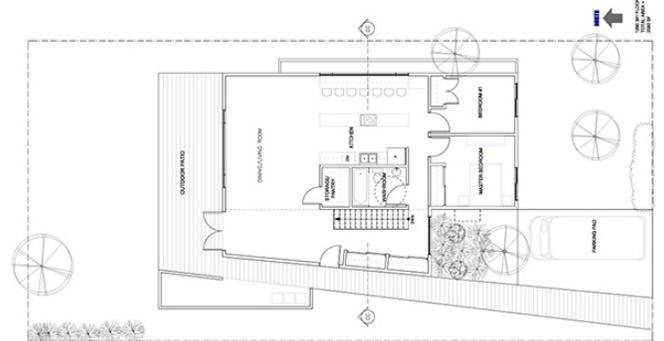

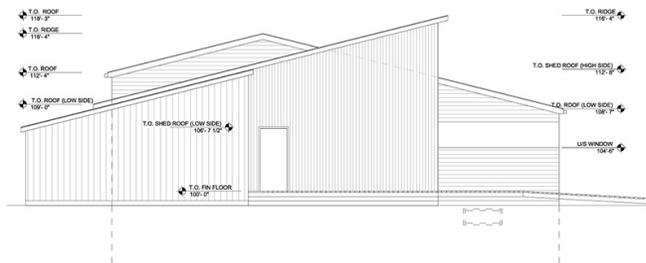

Canada – Experimental

A collaboration between the Faculty of Architecture, University of Manitoba and Habitat for Humanity created the first visitable house in Winnipeg.

Habitat One

In 2007, Habitat for Humanity Winnipeg built its first visitable house in collaboration with the Faculty of Architecture from the University of Manitoba. The design team included students, interns, and professionals working towards a well-designed visitable housing solution for lower income families in Winnipeg.

<http://visitability.wordpress.com/2010/06/30/habitat-one-winnipeg/>

3. Key Findings — Current Practices

Canada — Implemented

Visitable projects in Canada have been completed in Toronto, Edmonton and Winnipeg.

Ryerson Commons

Ryerson Commons is a seniors complex in Cobourg, Ontario that offers three home designs (The Victorian, The Sterling, The Burwash) that incorporate visitability criteria. Visitability features are marked with green on the Floor Plans.

<http://visitability.wordpress.com/2010/06/30/ryerson-commons-cobourg-ontario/>

Larch Park

“Larch Park at Magrath” is a community in the southwest of Edmonton designed and moderated by Meclor Developments. They have set forth guidelines for construction that individual builders must conform to. Melcor developments has taken on the parallel initiative of sustainable homes and communities. In their building guidelines they stress the importance of visitability and state that all homes must have wider hallways and one bathroom on the main floor and they strongly advise having zero-step entries. Based on an estimate from the community maps with the lot plans, there are approximately 138 single family homes that will be built to these requirements.

<http://visitability.wordpress.com/2010/06/25/larch-park-guidelines/>

Waverly West

Subsidized housing development northwest of Winnipeg, Manitoba. Half the homes will be visitable.

<http://visitability.wordpress.com/2010/06/30/homes-to-be-wheelchair-friendly-visitable-development-one-of-few-in-canada/>

3. Key Findings — Current Practices

Raising Awareness

Awards programs as well as certification and education programs are effective strategies for raising awareness about visitability.

Awards Programs

Livable Communities Awards

“When it comes to their homes, Americans of all ages want the same thing – a safe and comfortable home in a vibrant community. The Livable Communities Awards, co-sponsored by AARP and the National Association of Home Builders (NAHB), recognize builders, remodelers, developers, architects and planners who build and design homes and communities that improve everyday comfort, safety and personal independence.”
<http://visitability.wordpress.com/2010/06/29/the-2010-livable-communities-awards-submission-guidelines/>

Housing and Urban Development Awards Program

“The Housing and Custom Residential Committee Knowledge Community of The American Institute of Architects (AIA), in conjunction with the Office of the Secretary of the U.S. Department of Housing and Urban Development (HUD), recognizes excellence in affordable housing, community-based design, participatory design, and accessibility. Good design is a cornerstone of solid homes and thriving communities of all incomes and backgrounds.

These awards demonstrate that design matters and provide examples of important benchmarks in the housing industry.”

<http://visitability.wordpress.com/2010/06/30/2010-housing-urban-development-design-awards-program/>

Certification and Education Programs

Certified Aging-in-Place Specialist

The Certified Aging-in-Place Specialist (CAPS) designation program teaches the technical, business management, and customer service skills essential to competing in the fastest growing segment of the residential remodeling industry: home modifications for the aging-in-place
<http://visitability.wordpress.com/2010/06/30/certified-aging-in-place-specialist/>

3. Key Findings – Current Practices

aXess Homes Certification

Based in Texas, aXess Homes is the nation's first voluntary home certification program whose mission is to create affordable and attractive homes that incorporate at the very least, minimum accessibility into the construction – making homes visitable to everyone and providing the opportunity for homeowners to age in place should they choose to do so.

<http://visitability.wordpress.com/2010/06/30/axess-homes/>

Lifemark Certification

“The Lifemark, a certified trade mark and a consumer brand in New Zealand, is the seal of approval awarded to a home which is designed to be used, or adapted for use, by people of all ages and abilities – and which has passed a rigorous independent review process. The Lifemark seal of approval lets you know that a home has been designed according to the five Lifetime Design Principles: usability, adaptability, accessibility, inclusion and lifetime value.”

<http://visitability.wordpress.com/2010/06/10/lifemark-new-zealand/>

Lifetime Homes

“The concept of Lifetime Homes was developed in the early 1990s by a group of housing experts. Lifetime Homes are ordinary homes incorporating 16 Design Criteria that can be universally applied to new homes at minimal cost. Many planning policies already require the Lifetime Homes standard in new developments. For example, the London Plan. All public sector funded housing in England will be built to the Lifetime Homes standard from 2011 (it is an existing requirement in Wales and Northern Ireland), with a target of 2013 for all private sector dwellings.”

<http://visitability.wordpress.com/2010/05/26/lifetime-homes/>

Executive Certificate in Home Modification Program

“This program is designed for professionals (e.g., remodelers/contractors, planners, personnel of organizations representing the elderly and people with disabilities, occupational and physical therapists, policymakers) who work directly or indirectly in the field of supportive home environments. Students can take one course or all five right from the comfort of their computer. By completing all five courses, students will obtain an Executive Certificate in Home Modification from the National Resource Center on Supportive Housing and Home Modification at USC.”

<http://visitability.wordpress.com/2010/06/30/executive-certificate-in-home-modification-program/>

Advocacy Organizations

Concrete Change (US)

“Our focus is new homes. Not government buildings, restaurants, etc. (important as they are). Our goal is to make all homes visitable, not just ‘special’ homes – to be at the party, meeting and family reunion... not isolated. We narrow the emphasis from a long list of access features to the most essential: entering a home and fitting through the interior doors. So that widespread construction change is more likely to happen quickly.”

<http://visitability.wordpress.com/2010/05/25/concrete-change-every-new-home-visitable/>

3. Key Findings – Current Practices

Visitability Canada

“Vision + Purpose: We imagine Canada as a country with a vibrant housing sector that constructs attractive, affordable, accessible and sustainable housing to meet the needs of all Canadians. We imagine housing that supports vibrant, socially inclusive communities that are livable at all stages of life. We are working to bring together key people, create a dialogue, share information and collect information to promote this vision and invite you to join us.”

<http://visitability.wordpress.com/2010/05/25/68/>

Joseph Rowntree Foundation (UK)

“The Joseph Rowntree Foundation is an endowed charity that funds a large, UK-wide research and development programme. They seek to understand the root causes of social problems, to identify ways of overcoming them, and to show how social needs can be met in practice. “

<http://visitability.wordpress.com/2010/05/26/joseph-rowntree-foundation/>

Centre for Inclusive Design and Environment (US)

“The IDeA Center practices human centered design through research, development, service, dissemination and educational activities. The primary goal of the Center is to produce knowledge and tools that will increase social participation of groups like people with disabilities and the older generation, who have been marginalized by traditional design practices. Our research activities include systematic reviews, human factors research, usability studies in the field and laboratory, survey research, focus groups and ethnographic studies.

Our development activities include architectural design, product development, information technology resources and organizational development activities. The Center produces many dissemination products in both traditional and digital forms and engages in public, university and continuing education initiatives.”

<http://visitability.wordpress.com/2010/05/26/idea-center-for-inclusive-design-and-environment/>

American Association for Retired Persons Public Policy (AARP)(US)

“For more than 50 years, AARP has been serving its members and creating positive social change. AARP’s mission is to enhance the quality of life for all as we age, leading positive social change and delivering value to members through information, advocacy and service. We believe strongly in the principles of collective purpose, collective voice, and collective purchasing power, and these principles guide all organization efforts. AARP works tirelessly to fulfill its vision: a society in which everyone ages with dignity and purpose, and in which AARP helps people fulfill their goals and dreams. AARP speaks with one voice – united by a common motto: “To serve, not be served”.”

<http://www.aarp.org/>

4. Strategies

Areas of Investigation

The Key Findings from the Environmental Scan created a snapshot of the current state of visitability research, legislation, and practices. The next step in the Study was to analyze these findings and develop a strategic framework for initiating a visitability agenda for Alberta.

The analysis revealed three strategic areas, Education, Legislation, and Implementation, around which the framework should most effectively be structured.

The documents collected in the Environmental Scan were categorized into one or more of these strategic areas. Each set of documents was then sub-categorized into a series of Approaches and Models before being prioritized in terms of their potential impact and relevance to the Alberta context.

A graphic representation of this analytical process is included for each strategic area.

Strategic Areas

- 1. Education**
- 2. Legislation**
- 3. Implementation**

4. Strategies – Education

Education

A general lack of awareness about visitability was identified as a major barrier to implementation. The environmental scan revealed thirty-six educational strategies to combat this issue among policy makers at all levels of government, the building industry, home buyers, and the general public.

Based on the evidence from the environmental scan, four audiences were deemed critical to educate about visitability:

- locally elected government officials
- developers
- home builders
- home-buyers

- a tax credit incentive program
- a zero-step entrance manual
- a visitability home certification/checklist program

Six Educational strategies were identified as significant to the Alberta context:

- individual lobbying
- a model visitability by-law
- a visitable demonstration house

Individual lobbying, a model visitability by-law, and a visitable demonstration house were deemed to be critical strategies for the development of a visitability agenda for Alberta.

4. Strategies – Education

	Degree of Relevance	Audience	Strategies
Educational Strategies - Relevance to Alberta	CRITICAL	Government - Local Elected Building Industry - Developers Building Industry - Builders Home Buyers - Families	6
	HIGH	Allied Groups - Sustainability Allied Groups - Social Justice Government - Provincial Elected Home Buyers - First Time	12
	MODERATE	Building Industry - Engineers Government - Administration Home Buyers - Empty Nesters Building Industry - Realtors	5
	LOW	General Public Government - Federal Elected Allied Groups - Armed Forces Building Industry - Architects	13

36 strategies total

	Barriers	Benefits	Strategy
Government Local Elected	Lack of Concern Among Electorate Lack of Awareness	Gain Seniors Votes Decrease Government Spending Increase Edmonton and Calgary's appeal to talent and business	Individual Lobbying Model Visitability Bylaw Visible Demonstration House
Building Industry	Developers Cost Marketability Technical Constraints Lack of Awareness	Minimal cost Competitive advantage	Tax Credit/Incentive Program
	Builders Cost Marketability Technical Constraints Lack of Awareness	Easy to implement Avoid regulation	Zero-step entrance manual
Home Buyers Families	Driven by current needs not future needs	Increased resale value Benefits all stages of family life	Visitability Home Certification/Checklist Program

Habitat One [Winnipeg]

“A design team including students, interns, and professionals worked toward creating well-designed visitable housing solutions for lower income families in Winnipeg. The designs were presented to Habitat for consideration for construction in the spring of 2007. AWB then invited students, staff, and instructors at the Faculty of Architecture to participate in a Habitat for Humanity building blitz. Volunteers built the first ‘visitable’ Habitat house in Winnipeg.”

<http://visitability.wordpress.com/2010/06/30/habitat-one-winnipeg/>

4. Strategies – Legislation

Legislation

The analysis identified that some sort of visitability legislation is a necessary component of almost every successful visitability implementation strategy. The environmental scan revealed seventy-five legislative strategies for implementing visitability at federal, provincial, and local levels.

Based on the evidence collected, three types of legislation were identified as potentially significant:

- a federal building code
- a provincial standard
- a local by-law

A local model visitability code or by-law was considered the most critical early step for implementing visitability within Alberta. The Bolingbrook Visitability Ordinance or the Barrier Free Requirements in Atlanta Georgia appear to be the most relevant legislative precedents.

4. Strategies – Legislation

Legislative Strategies - Relevance to Alberta

Degree of Relevance	Jurisdiction	Legislation	Precedents
CRITICAL	Federal State / Provincial Local	Building Code Standard By-Law	5
HIGH	Federal State / Provincial Local	Law Guidelines By-law	10
MODERATE	Federal State / Provincial Local	Building Code Incentive Law Strategy Plan	29
LOW	Federal State / Provincial Local	Act Law Non-Statutory	31

75 documents total

Place / Name	Degree of Visitability	Housing Type	Benefit / Barrier	Timeline
Ontario Ontario Building Code - Visitable Apartments	Basic Visitability	10% of housing units	- good Canadian precedent - only applies to multi-family housing	
Ontario Accessible Built Environment Standard	Basic Visitability	Not Determined (currently proposed)	-opposition from Home Builders Association - not enacted yet	2-3 years
Atlanta, Georgia Barrier Free Requirements	Exceeds Visitability	Subsidized Housing	- first 'Visitability' code passed, 1992 - only applies to subsidized housing	3 years
Bolingbrook, Illinois Visitability Code	Exceeds Visitability	All Housing	- successfully passed with little to no opposition	4 years
Pima County, Arizona Inclusive Home Design Ordinance	Exceeds Visitability	All Housing	-opposition from Home Builders Association - not enacted yet	

4. Strategies – Legislation

Approved Document M – Access to and Use of Buildings UK Government

Part M Legislation document, the section of the UK's building code that covers dwellings and accessibility. "Part M Guidelines: A level or ramped approach to the house which is at least 900 mm wide. An accessible threshold at the entrance to the house. An entrance door which provides a minimum clear opening of 775 mm. A toilet in the entrance storey which wheelchair users can access. Corridors and hallways in the entrance storey sufficiently wide to allow circulation by a wheelchair user. No changes of level on the entrance storey apart from on steeply sloping sites. Switches and sockets sited between 450 mm and 1200 mm from the floor. The provision of lifts in flats is not a requirement. Where a lift is provided in flats, a minimum lift capacity and dimensions will be recommended. Where a lift is not provided, the common stair to be designed to suit the needs of ambulant disabled people. N.B. the provisions apply to flats as well as houses"

Ontario's Initial Proposed Accessible Built Environment Standard

As required by the Accessibility for Ontarians with Disabilities Act, the Minister of Community and Social Services appointed a Standards Development Committee (SDC) to develop the proposed Accessible Built Environment (ABE) Standard. The Committee's task is to: develop an initial proposed standard that will focus on the first five years, to be submitted to the Minister for public review; consider comments received during the public review, making any changes the committee considers advisable; and submit a final proposed standard to the Minister of Community and Social Services to enact into law.

4. Strategies – Implementation

Implementation

The analysis clearly indicated that some sort of real world implementation of visitability principles is an important early stage component of a successful implementation strategy. The environmental scan revealed seventy-one visitability implementation precedents.

The precedents were analyzed for their relevance to the Alberta context and four critical implementation examples were identified:

- The Demonstration Home in Atlanta Georgia completed by Concrete Change and Habitat for Humanity, Atlanta;
- Habitat One Demonstration Home completed by the University of Manitoba Faculty of Architecture and Habitat for Humanity, Winnipeg
- The Sustainable Homes program in Australia by the Queensland State Government;
- The Barratt Green House in the BRE Innovation Park, United Kingdom by the BRE Group and Barratt Homes.

A visitable demonstration house that provides a concrete example of visitability principles was considered a critical early step in implementing visitability in Alberta. Habitat One in Winnipeg appeared to be the closest relevant precedent for achieving this goal.

4. Strategies – Implementation

Smart & Sustainable Homes Program

The Sustainable Homes program is providing communities throughout Queensland with display homes which incorporate principles of sustainable design and performance utilising the Smart & Sustainable Homes Design Objectives. The homes are unique because they provide practical examples within their regional climatic context of dwellings that aim to meet the triple bottom line concept of sustainability i.e. environmental, social and economic sustainability. Visitability criteria were part of each home design. Extensive drawings, photos, and floor plans are available for each project built under the sustainable homes program. <http://visitability.wordpress.com/2010/06/29/smart-sustainable-homes-program/>

Barratt Green House, UK

The first Code for Sustainable Homes Level 6 house built by a major homebuilder. The Barratt Green House is a three/four bedroom family house designed to provide a solution to the needs of low energy, high density volume housing of the future. It is a direct response to the government's target of zero carbon housing by 2016, and includes Lifetime Homes criteria. <http://visitability.wordpress.com/2010/06/30/barratt-green-house-uk/>

Habitat One [Winnipeg]

"A design team including students, interns, and professionals worked toward creating well-designed visitable housing solutions for lower income families in Winnipeg. The designs were presented to Habitat for consideration for construction in the spring of 2007.

AWB then invited students, staff, and instructors at the Faculty of Architecture to participate in a Habitat for Humanity building blitz. Volunteers built the first 'visitable' Habitat house in Winnipeg." <http://visitability.wordpress.com/2010/06/30/habitat-one-winnipeg/>

Concrete Change (US)

<http://www.concretechange.org/>
Concrete Change partnered with Atlanta's Habitat for Humanity in 1992 and instigated the visitability movement by building twenty-two visitable homes. <http://visitability.wordpress.com/2010/05/25/concrete-change-every-new-home-visitable/>

4. Strategies – Ongoing Canadian Initiatives

Ongoing Canadian Initiatives

Although visitability awareness, legislation, and projects are still in the early stage of development in Canada, a number of initiatives are currently underway.

The environmental scan clearly demonstrated that successful visitability programs in various countries rarely developed in complete isolation and that much time and effort can be saved when information and expertise is shared.

Monitoring ongoing Canadian visitability initiatives was considered a critical early step for implementing visitability within Alberta. Actively creating opportunities for synergies with these parallel initiatives should be seriously considered in order to share information, expertise, and even perhaps, programs or projects.

The Environmental Scan identified ten ongoing Canadian visitability initiatives that should be monitored for future developments:

- **Waverly West, Winnipeg**
- **Measuring Up the North, BC**
- **Proposed Accessible Built Environment Standard, Ontario**

- **Canadian Home Builder's Association (CHBA) Best Practices Guide**
- **CMHC Housing Awards — Best Practices in Affordable Housing: Recognizing Leadership from the Private Sector**
- **Ryerson Commons, Cobourg, Ontario**
- **Homeworks!, Manitoba**
- **Canada Mortgage and Housing Corporation Library**
- **Visitability Canada**
- **Pending Federal Legislation to ensure secure, adequate, accessible and affordable housing for Canadians**

4. Strategies – Ongoing Canadian Initiatives

Selected References:

Waverly West, Winnipeg

A new neighborhood is being built in Winnipeg where over half of the homes will be visitable (670/1225 homes). The Waverly West neighborhood will be the first of its kind in Winnipeg. The plan was set to be submitted to city council in July 2010. <http://visitability.wordpress.com/2010/06/30/homes-to-bewheelchair-friendly-visitable-development-one-of-few-in-canada/>

Measuring Up the North, BC

Over 40 Cities, Towns, Villages and Districts in Northern BC are working to make their communities livable age-friendly, disability-friendly, universally designed, inclusive for all citizens and visitors. In 2009, 175 delegates from these forty municipalities pledged to implement visitability initiatives in their communities. <http://visitability.wordpress.com/2010/08/05/measuring-up-the-north-phase-1-final-report-appendix-7-prince-george-visitable-housing-declaration/>

Proposed Accessible Built Environment Standard, Ontario

The Ontario Government is issuing five sets of standards under the Accessibility for Ontarians with Disabilities Act, 2005 (AODA) to achieve the vision of a barrier-free Ontario by 2025. The first draft proposed Accessible Built Environment Standard was released for public review from July to October, 2009. The committee is now revise the proposed standard to reflect the public's input and will submit a final proposed standard to the government for consideration as law. The final proposed standard was supposed to have been submitted in Spring 2010. <http://visitability.wordpress.com/2010/08/03/initial-proposed-accessible-built-environment-standard/>

Canadian Home Builder's Association (CHBA)

Visitability is on the CHBA's scope and they will be producing a report and best practice guide probably within the next 1-2 years. <http://visitability.wordpress.com/2010/08/03/the-national-scenecanadian-home-builders-association-chba/>

CMHC Housing Awards — Best Practices in Affordable Housing: Recognizing Leadership from the Private Sector

The CMHC Housing Awards Program was created in 1988 to identify, recognize, showcase and share best practices that have helped to improve the quality, choice and affordability of housing in Canada. The Program honoured the people and organizations creating affordable housing solutions across Canada and helped share their best practices with communities across the country. Many of the past winners have featured visitability. <http://visitability.wordpress.com/2010/08/05/2008-housing-awards-winning-best-practices-in-affordable-housing-flora-place/>

Ryerson Commons, Cobourg, Ontario

Ryerson Commons is a seniors complex in Cobourg, Ontario that offers three home designs (The Victorian, The Sterling, The Burwash) that incorporate visitability criteria. Visitability features are marked with green on the Floor Plans. As one of the few private developments featuring visitability in Canada, the sales and marketing should be monitored. <http://visitability.wordpress.com/2010/06/30/ryerson-commonscobourg-ontario/>

4. Strategies – Ongoing Canadian Initiatives

Homeworks!, Manitoba

HomeWorks! is A Housing Strategy and Policy Framework for Manitoba. In 2009 \$5.4 million in funding was earmarked for HOMEWorks! For Manitobans with disabilities. This two-year federal-provincial initiative includes targeted construction of additional housing units and will focus on greater community living for people with intellectual disabilities, physical accessibility and housing that people with mobility restrictions can easily access (visitable housing).

<http://visitability.wordpress.com/2010/06/29/homeworks/>

Canada Mortgage and Housing Corporation Library Canada Mortgage and Housing Corporation

(CMHC) is Canada's national housing agency. Established as a government-owned corporation in 1946 to address Canada's post-war housing shortage, the agency has grown into a major national institution. CMHC is Canada's premier provider of mortgage loan insurance, mortgage-backed securities, housing policy and programs, and housing research. The CMHC's research and publication database should be monitored for newly published relevant visitability and accessibility documentation.

<http://visitability.wordpress.com/2010/05/25/canada-mortgage-andhousing-corporation-library/>

Visitability Canada

The purpose and long-term outcome of this project is to determine the impact of visitability on communities. This project will be a major step forward in creating inclusive and livable communities. The project focuses on Canada to discover where visitability initiatives are taking place and what factors are facilitating its growth or are creating barriers to implementation. Visitability Canada should be monitored for any updates.

<http://visitability.wordpress.com/2010/05/25/68/>

An Act to ensure secure, adequate, accessible and affordable housing for Canadians

An Act to ensure secure, adequate, accessible and affordable housing for Canadians. This bill mandates: The national housing strategy shall include incentives for affordable rental housing and shall ensure the availability of housing that a) is safe, secure, adequate, affordable, accessible, and not-for-profit in the case of those who cannot otherwise afford it; (c) provides access for those with different needs, including, in an appropriate proportion, access for the elderly and the disabled that allows for independent living as a result of housing adaptations; (f) includes not-for-profit rental housing projects, mixed income not-for-profit housing cooperatives, special-needs housing and housing that allows senior citizens to remain in their homes as long as possible. This act is currently under debate in the Canadian Parliament.

<http://visitability.wordpress.com/2010/06/10/n-act-to-ensure-secureadequate-accessible-and-affordable-housing-for-canadians/>

5. Recommendations

Recommendations

The strategic frameworks developed in the areas of education, legislation, and implementation resulted in a tightly focused set of potential action items that are well suited to the Alberta context and have had demonstrated success in other jurisdictions.

The final step in the Study was to prioritize these strategic frameworks into the following five recommendations:

- 1- **Combine** an incremental, ground-up approach with a legislative, top-down initiative
- 2- **Identify** an individual champion
- 3- **Realize** a Visitable Demonstration Project
- 4- **Draft** a sample visitability Code or by-law
- 5- **Maintain** a currency in visitability practice

These recommendations should be used to help guide the next stage of development of the visitability agenda in Alberta.

5. Recommendations

1. Combine an incremental, ground-up approach with a legislative, top-down initiative

The Study clearly indicates that within a social and legislative context such as the one in Alberta, only using a top-down overly prescriptive approach is either not possible or palatable.

Market based housing development does not respond well to being told what to do and consumers can be easily scared off. Despite the social benefits to a broad base of the population, it is difficult for politicians in this context to pursue an overly regulated approach to visitability.

The academic research consistently points to the success of ground-up incremental programs in this kind of situation. The sustained successes of this approach in Atlanta, Bollingbrooke, and other US jurisdictions points to the validity of an approach that starts small and builds on a series of incremental successes.

Equally important to this incremental approach is the need to collaborate with other organizations and social/political agendas to build Visitability. This extends from the specific collaboration with social housing groups such as Habitat for Humanity for help in actually realizing built Visitability projects to an association with parallel initiatives such as Aging In Place, Senior's Health and, in particular, the environmental movement.

5. Recommendations

2. Identify an individual champion

The Study also clearly found that the existence of an individual champion to advocate for visitability in the local community is a strong indicator of success.

The credibility of this local advocate lends authority to the visitability agenda and begins to breakdown some of the barriers to implementation through increased public awareness and acceptance.

In the majority of success stories in the Study, the champion was a high profile, well respected politician. Although this is not absolutely necessary, this kind of individual has the requisite public visibility to drive the agenda. There was no apparent preference identified in the Study as to which level of government the Champion operated within. In some cases they were local mayors or prominent councilors. In other situations they were state level politicians. Only rarely was a successful champion a federal politician.

The study indicated that the champion need not be directly involved in the visitability movement in order to be effective. In fact, some distance seems to provide some level of perceived objectivity that both consumers and members of the construction industry respond positively to.

5. Recommendations

3. Realize a Visitable demonstration project

Having a high profile demonstration project was clearly identified in the study as a critical factor in improving public awareness of visitability.

The ability for the residential construction industry, parallel advocacy groups, as well as politicians, and members of the public to visit a real world example of 'visitability in action' is virtually irreplaceable.

A real world project clearly demonstrates what visitability actually means and how much it will actually cost. As such it is a very effective strategy for breaking down a variety of barriers to implementation ranging from concerns about cost from builders to worries about functionality or style from home owners.

A significant indicator of success for the demonstration project is its public profile. Simply building a visitable house is not enough. The study clearly indicates that in order to maximize its educational potential the project should be situated in a highly public context that has high visibility and a large number of visitors. Integrating visitability into the Dream Home at the Calgary Stampede was noted as a very promising option to pursue.

The Study showed that collaborating with existing residential advocacy programs such as Habitat for Humanity was shown to be very successful. These organizations not only have the technical expertise to realize a non-standard house design according to a non-standard process, they usually also have a high, and positive, profile in the local community.

In addition, the successful collaboration between Habitat for Humanity and the Faculty of Architecture at the University of Manitoba that led to the completion of a visitability Demonstration Project is of note as a potential model for Alberta.

5. Recommendations

4. Draft a sample Visitability Code or by-law

The creation of a model visitability Code or by-law was identified as a critical factor in promoting the implementation of visitability legislation.

The Study clearly indicated that most local jurisdictions do not have the time, energy, or money to develop their own visitability legislation from scratch. This can be a significant barrier. A model Code offers an effective way for local jurisdictions to work around this barrier by either implementing the sample by-law as presented or modifying it to their specific requirements and then integrating into their existing legislation.

This has been particularly successful in the US where model codes developed in Atlanta Georgia and Bollingbrook Illinois have been used by other local jurisdictions throughout the country.

5. Recommendations

5. Maintain a currency in Visitability practice

Although implementation of Visitability appears to move very slowly in any specific locale, the Environmental Scan revealed that the field, as a whole, is developing quite rapidly.

Although implementation of visitability appears to move very slowly in any specific locale, the Environmental Scan revealed that the field, as a whole, is developing quite rapidly.

New academic research is being regularly published. This work tends to focus on critical evaluations of policy, market receptivity studies, case study analyses, as well as more broadly based work on the implications of visitability within a larger context.

New legislative strategies are also being regularly developed and implemented at a variety of jurisdictional levels. These are not only important as legislative precedents per se. The documentation that surrounds these legislative actions also provides a critical sense of the evolving real world context within which visitability agendas are working.

New implementation strategies for promoting visitability are also being planned, built, and used. These include demonstration projects, awards and recognition programs, and marketing campaigns as well as the documentation of successfully implemented visitable housing projects.

Remaining current with the state of the art of visitability research, legislations, and practice is an important component of any local visitability agenda.

Building Industry in Canada

The building industry in Canada is conformed by multiple stakeholders. The following diagram shows the two levels of stakeholders; the land developers, builders and realtors; and the professional and consultants that support the building industry.

The first level within the building industry hold the most power for lobbying and change. They control the land and financial resources and they also are the first point of contact with the general consumer.

The second level in the industry are the design and technical professionals that can provide creative solutions for the introduction of innovation into the building industry.

Legend

Three main steps of the building process and stages where the different stakeholders are involved

Appendices — b. Regulatory framework in Alberta

b. Regulatory Framework in Alberta

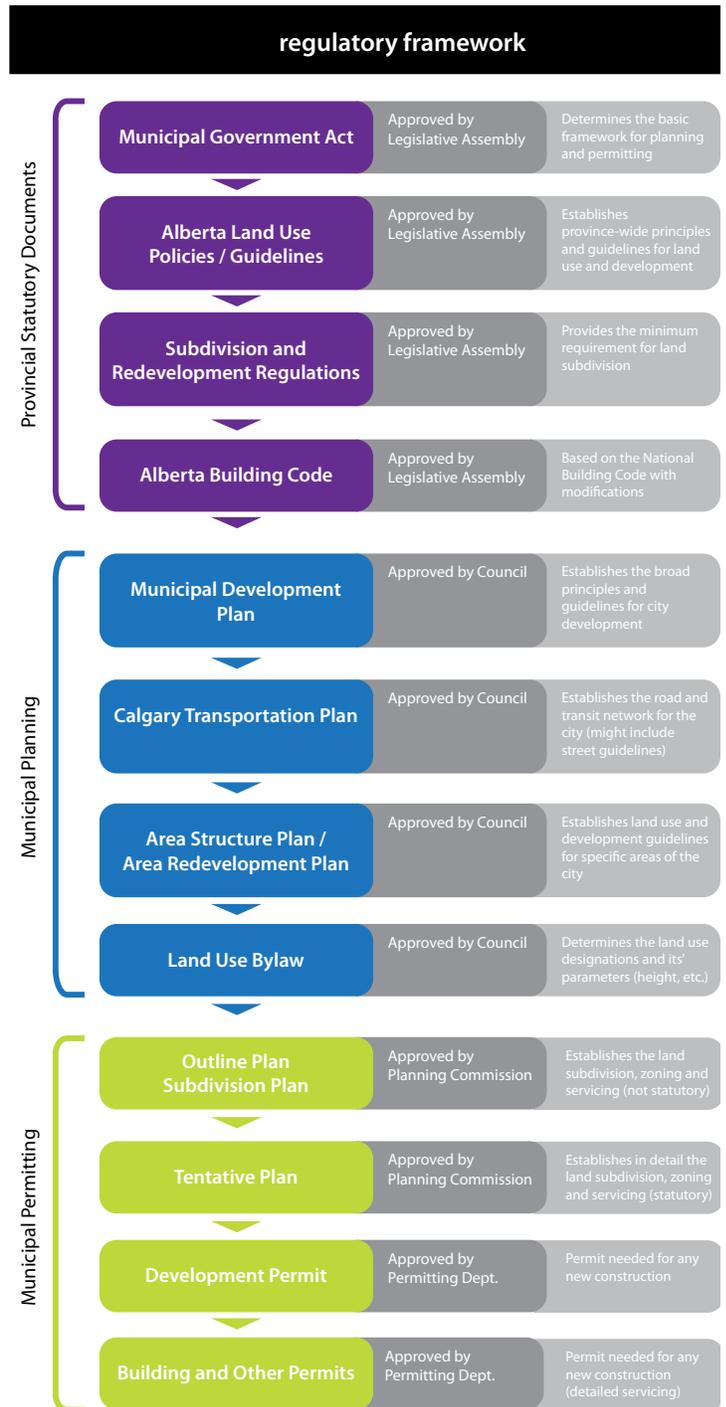

This diagram show Alberta’s regulatory framework specific to building homes, neighbourhoods, towns and cities. There are three types of regulations, provincial documents, municipal planning documents and municipal permitting documents.

This diagram shows each one of the different documents, the authority that approves the document and makes it statutory, and subject matter that the document addresses.

This diagram it’s a tool that maps the potential legal instruments that influence the implementation of visitability and could be targeted for innovation.

Legend

- Provincial statutory document
- Municipal planning document
- Municipal permitting document
- Authority approving the document
- Subject matter addressed by document

Appendices — C. Master research database (table)

c. Master research database (table)

The following table is the compilation of all documents found during the environmental scan phase of this project.

Legend/Table headings

- Date (date the document was found)
- Document Type
- Name (title of the document)
- Source
- Date published
- Link (link to original source)
- Monitor (is it ongoing? Does it need to be monitor?)
- Abstract
- Notes
- Key Words (key words assigned)
- Digital Copy Y/N (does a digital copy exists?)

The entrances that are highlighted are being identified as key documents in the research.

A digital version of the research database is available through the Faculty of Environmental Design, University of Calgary Website (www.ucalgary.ca/evds).

ISBN: 0-7890-0971-4	Source	1999	NAC245.A3.A35:2000		Designing, Adapting, and Enhancing the Home Environment gives you a complete examination of current trends in adaptive home design for older adults. As a therapist, designer, architect, lobbyist, or researcher, you will find this book a valuable resource for creating environments that offer optimal living for aging adults. Aging in Place will show you innovative home designs and studies for people of all ages. It also includes information on how to improve the quality of life for the elderly by offering them state-of-the-art designs that encourage independence and dignity. This unique and exciting book covers topics such as universal design, ergonomics, lighting, and safety. It also discusses the latest trends in home design and light switches that are usable by all people to the greatest extent possible, regardless of age or ability. Aging in Place will also show you how to use follow-up visits by occupational therapists to help people with vision rehabilitation by using controlled lighting and color schemes evaluate the quality of life for elderly people living in personal care facilities and nursing homes explore the latest trends in home design and how to design homes to meet the needs of people with disabilities. The book also includes a complete guide to understanding the needs and latest trends in home design for people with disabilities. Aging in Place is a complete guide to understanding the needs and latest trends in home design for people with disabilities. The book gives you information on how to design homes to meet the needs and preferences in regard to modifications in personal and public dwellings. The information will assist you with better serving the elderly by helping them live more independently.		Aging in Place, Architecture, Home Modifications, Universal Design	N

5/19/2010	Academic Research [Book]	Focus groups to examine barrier-free and adaptable housing design	Ottawa: Canada Mortgage and Housing Corporation (1996)	1996	UOFC LIBRARY NQ2545 A1 F53 1996		Seventeen focus group meetings were held across Canada to solicit input from people with disabilities. The focus groups involved seniors, older adults and people with disabilities. Participants identified basic and custom features which affect their decisions to purchase or rent homes. The scope of the study was to identify the most important and adaptable features which are most important to participants as described and reported. Participant feedback, opinions, and sometimes challenges, opinions heard by researchers, and sometimes challenges, opinions heard by widespread support include those which contribute to wheelchair access, safety, ease of use, or future adaptability. Most participants expressed a preference for living in their own homes, but everyone at various stages of their lives, especially in bathrooms, kitchen bedrooms and entrances. Accommodations for people with sensory impairments are considered in many safety, adaptable and daily-use environments. The concept of visability describes features of private visability in Montana. METHOD: A visability question was included as part of the 2004 Montana Behavioral Risk Factor Surveillance System (BRFSS) Questionnaire, a random-digit-dial telephone survey. Respondents (19.9%) said "a person who uses special equipment such as a wheelchair... could get into their house without being carried up steps or over other obstacles." Respondents with a disability who did not live in a visitable house to report any days of poor mental health in the past month. CONCLUSION: The BRFSS affords the opportunity to assess the health and life quality of people with disabilities. Here, BRFSS data provided a baseline rate for visitable homes in the state. Strategies to increase this number are discussed.	Edmonton, Visability, Home Modification, Health, Surveillance

5/11/2010	Academic Research [Journal Article]	Disabling Homes: a study of the lives of disabled people in Cornwall	Disability & Society, January 1995, pages 71 - 86	January 1995	University of Calgary Call Number HV1551 INTERNET	This research was carried out between January and July 1993. The research was carried out through a process of consumer consultation. It was concerned to find out the extent and nature of that need whilst also testing out consultation through the use of research methods in the field. The nature of need was found to be qualitatively different to that found through the study of normative needs. A significant finding was that the need for housing was not primarily about housing and this was being reinforced by the agencies that were intended to help them. In particular, the failure to consult disabled people was leading the local authorities to make inappropriate plans for housing. The findings of the research were presented to the local authority and were supported by their operation of the Disabled Facilities Grant. The findings support the call for other writers that the solutions to housing problems will only come through viewing disability as a civil rights issue. 5/14/2005	Academic Research [Journal Article]	A Health and Demographic Profile of Noninstitutionalized Older Americans Residing in Homes with Home Modifications	Journal of Aging and Health, vol. 12, no. 2, pp. 204-228	2000	University of Calgary Library Call Number: RA564.8 IN INTERNET	Objectives in this analysis the authors investigate the demographic characteristics, the health conditions/events, and the disabilities of community-dwelling Americans 70 years of age and older that are associated with home modifications. Methods: Data from a large population-based study of the elderly are used to estimate logistic regression equations that predict the presence of home modifications. Results: Older Americans having experienced a hip fracture, a fall or a joint replacement, and having greater limitations with activities of daily living raise the odds of having home modifications. Conclusions: The authors conclude that African American elderly appear underrepresented among those with home modifications. Discussion: The authors conclude that specialized housing alternatives will be an increasingly important issue in the coming years. The authors call for a balance between the functional ability and their living environment.	Home Modifications, Research, Demographics, Data.

This residential design that modifies standard building elements to improve a home's accessibility and usability. A new resource guide from HUD's Office of Design and Universal Design, Making Homes More Comfortable and Accessible, provides technical guidance on selecting and installing universal features during home remodeling or renovation. The guide covers a wide range of home features, including kitchen and bathroom features, Residential Remodeling and Universal Design describes potential benefits of design features, suggests alternative solutions, and provides information on how to find resources for the housing professional and the do-it-yourselfer alike. Its clear descriptions and abundant graphics can help homeowners plan remodeling or renovation projects.	Universal Design, Architecture, Illustrations, Solutions, Guidelines	Y	
5/12/2010	Academic Research [Book]	Cost Benefit Cost Analysis: Accounting for Non-Market Values in Planning Evaluation	Urban Planning and Environment, Donald Miller & Domenico Mirre, pp. 1-10. ISBN: 0-7546-6094-3	2005	n/a	Estad, This book examines how non-market values can be identified, measured and incorporated into planning evaluation methodologies. The authors argue that the current methods of cost-benefit analysis, requires that all effects be expressed in monetary terms and this volume offers alternative approaches. It presents strategies for accomplishing the major purposes of planning evaluation - including identifying and measuring the benefits of alternative ways. Growing demand for public involvement and accountability in decision making requires better means for accommodating a broad range of concerns in planning evaluation. The authors argue that the current methods of cost-benefit analysis, and the book explores how these have been applied in practice in developing special-issue plans, complex regional development strategies, and efforts to analyze the environmental and social impacts of large-scale development projects. The book also explores problem structuring methods by stakeholder groups are also explored.	Viability

AC: Related Issues, Consumer, UK	5/12/2010	Academic Research [Journal Article]	Negotiating difference, disabled housebuilders	Housing Studies, Sep 2004, Vol. 19 Issue 5, pp657-680, 16p	September 2004	University of Calgary Library Call Number HD7285 INTERNET		<p>Little is known about the extent of disabled people's exclusion from the housing market. This paper explores the processes of exclusion and considers how disabled potential owner occupiers experience exclusion at the point of the sales rooms and viewing properties. A multiple case study was undertaken with 11 disabled people who had experience of disabled people with mobility impairments, encounter barriers which are physical, attitudinal and systemic. Conclusions are reached that disabled people are excluded from the housing market for a variety of reasons because they are not taken into account at the design stage. Certain key changes in the design of homes for owner occupation are required in order for people with physical impairments to approximate growing awareness and recognition of the needs of different 'bodies' in the housing system. However, little is known of the ways in which to scale-bodied norms and how this impacts on their dealing with such groups. Drawing on the experiences of disabled people accessing the private housing market, this paper explores the processes of exclusion and housebuilders during the purchase of new-build property. It is argued that underlying practical discussions around the (re)design of housing for disabled people are the needs of disabled people and various roles assumed by each group. For example, lacking an institutional awareness of the needs of different bodies in domestic buyers become the experts as they hold knowledge of their design needs which housebuilders clearly lack. The paper concludes by discussing the implications for the housing industry in engaging with the needs of disabled people and the role disabled people themselves can play in this.</p>	Large relevant bibliography to investigate (relevant entries NOT copied into 'to review' bibliography)

A proposed solution by government is the adoption of lifetime homes (LTH) standards that are likely to become mandatory for newly constructed dwellings in the private sector in London by July 2008, and to evaluate to what extent they are able to address the problems for disabled people caused by physically inaccessible dwellings. The paper examines the implications of LTH standards and suggests that while they are, in some respects, a positive development, they are not, in and of themselves, a panacea in relation to rectifying the shortfall of accessible dwellings.	Large relevant bibliography to investigate relevant research. The universal design concept seems to accommodate disability with the basic concept of a building's form, by sensiblising the environment to the broadest possible range of body shapes and sizes. It draws attention away from peoples' impairment as a source or site of difference to minimise the possibilities of social ostracism. (p. 365)		Y

AC-Related Issues, Legislation, US	6/22/2010	Academic Research [Journal Article]	Aging in Place, Housing, and the Law	TOEBEL, L.J. (2006)	2008	UCLIBRARY K5 INTERNET	<p>The study involved taking actual measurements of buildings as they were constructed as well as an assessment of the architectural plans. The study found that the majority of buildings were not in conformance with the Fair Housing Act. Over 60 percent of single-unit buildings were in conformance for a large majority of buildings. Conformance in architectural plans was slightly higher than for the actual buildings. The study found that the majority of buildings in deviation from plans is a substantial cause of non-conformance. This also suggests that educating both builders and architects could lead to improvements in conformance with the Act.</p> <p>The study also examined the impact of the Fair Housing Act on communities of older people. The study found that the majority of older people live in multi-unit housing. The study also found that the majority of older people live in multi-unit housing. The study also found that the majority of older people live in multi-unit housing.</p>	<p>Aging in place refers to the desire of older people to stay in their communities in spite of encroaching infirmities, and it is an increasingly important aspect of public policy. This movement has gained impetus from the decision in <i>Onstead v. L.C.</i>, which requires states to make community-integrated programs more widely available for persons with disabilities. The aging in place movement, however, is hindered by the general unavailability of accessible and affordable housing. Legislation, such as the Fair Housing Amendments Act, which applies only to multi-unit housing, has been the subject of weak implementation and generally resisted its extension to single family housing. In order to age in place, older people often have to modify their environment to accommodate their changing abilities. The challenges of finding age-friendly housing in their communities or of retrofitting existing homes, can present (a) older people with a difficult and costly decision. This acts to funnel them towards institutional settings, such as nursing homes, in spite of their contrary desires. To make aging in place a realistic option, Professor Pynoos in his Ann F. Baum Memorial Lecture on Elder Law, argues that new policies are needed to provide help modifying the environment. The study also examined the impact of the Fair Housing Act on communities of older people. The study found that the majority of older people live in multi-unit housing. The study also found that the majority of older people live in multi-unit housing. 5/12/2010	Academic Research (Journal Article)	Accessible Housing Availability for the Growing U.S. Aged Population	Housing and Society, vol. 34, no. 1, pp 101-115	2007	http://nicolcampbell.com/writing/accessible.pdf (file online)	The purpose of this study was to compare the number of accessible housing units available for purchase in the U.S. with the number of elderly households. The number of accessible housing units available for purchase in the U.S. with the number of elderly households would be proportionately higher than the number of available accessible housing units. Data for this research came from the MLS listings on www.realtor.com and the HUD 2005 Census of Housing and Occupancy for the United States. Municipalities with populations greater than 150,000 people were compared with elderly populations for those municipalities as well as the proposed elderly population for the year 2025. Analysis of accessible housing listings and elderly populations. Results showed that the Northeastern section of the U.S. had significantly more accessible housing listings than other sections of the country. However, housing availability in the Northeastern section of the country, elderly populations among the regions of the country. In addition, multiple regression analysis revealed a significant positive relationship between the number of accessible housing units available for sale. The results of this research revealed a major shortfall of accessible housing units in all areas of the country, which could have major implications for elderly citizens desiring to age in place and needing accessible housing to age in place.	The purpose of this study was to examine what accessible housing options were available for the current population of elderly citizens. The study also better understand the demographic characteristics of housing units on the real estate market. 	5/12/2010	Academic Research [Journal Article]	Is the Typical Modern House Suitable for Disabled Older People?	Age and Aging, vol 27, issue 3, pp 338-350	1998	University of Calgary Geriatrics Society, Call Number MEDICAL V.1, 1972	Independence in their own homes is desirable for most people but changes may be high. The most recent proposals for revision of the United Kingdom Building Regulations include provision for making all new housing accessible. The paper reports on a telephone survey of telephone survey of non-respondents. The response rate proved was 88% with 49% providing written replies. Only 3% of companies had designed and built adaptable housing, these are still at the trial stage. The paper discusses the reasons for the low response rate. Most companies accept that houses can be adaptable but economic reasons largely prevent them from doing so. Adaptable housing for 'aging' homes for life is not a high priority of building companies.		Housing, Old Age, Disability, UK, Study

	5/14/2005	Resource [Website]	Habitnet Housing Association	Habitnet Housing Association Ltd.	2010	http://www.habitnet.org.uk/main.cfm	The Joseph Rowntree Foundation is an endowed charity that funds a large, UK-wide research and development programme. They seek to overcome them, and to show how social needs can be met in practice.	Habitnet and London South Bank University, supported by the Homes and Communities Agency (HCA), are producing new research on housing for wheelchair users in England. The report aims to produce a national guide for purchase). Available reports must be further regional bodies, local authorities and housing providers to develop effective strategies to increase the supply and availability of accessible homes. The report will be available in July 2010.	Lifeline Homes, UK, accessibility	
	5/13/2010	Resource [Website]	Joseph Rowntree Foundation	Joseph Rowntree Foundation	Ongoing	http://www.jrf.org.uk/	The concept of Lifeline Homes was developed in the early 1960s by a group of housing experts. Lifeline Homes is a model of housing incorporating 16 Design Criteria that can be universally applied to new homes at minimal cost. Many planning policies already require the standard to be met. The model is being used in the London Plan. All public sector funded housing in LE England will be built to the Lifeline Homes standard from 2011 (it is an existing requirement in Wales and Northern Ireland), with a target of 2012 for the standard to be met in all other areas. We continue to promote the standard and provide resources to other organisations seeking to implement the standard through direct property development.	Site also has previously published reports, including Habitnet design guide and Wheelchair housing design guide (for purchase). Available reports must be further research reports on housing, communities, equality, and inclusion. Developed and advocated for the Lifeline Homes standard. Site needs to be searched for relevant research reports.	housing	
	5/13/2010	Resource [Website]	Lifeline Homes	Lifeline Homes Group	2010	http://www.lifelinehomes.org.uk/index.php	"Mission": For more than 50 years, AARP has been serving its members and creating positive social change. AARP's mission is to enhance the quality of life for all as we age, leading positive social advocacy and service. We believe strongly in the principles of collective purpose, collective voice, and collective purchasing power, to ensure that we can best serve our members and the public. We tirelessly to fulfill its vision: a society in which everyone ages with dignity and purpose, and in which AARP helps people fulfill their goals and dreams. AARP speaks with one voice -- united by a common "Our focus is new homes. Not government buildings, restaurants, etc. (important as they are). Our goal is to make all homes visible, not just "special" homes -- to be at the party, meeting and family reunion... features to the most essential: entering a home and firing through the interior doors. So that that widespread construction change is more likely to happen quickly."	Discusses the Lifeline Homes 16 Design Criteria. Also contains research reports that need to be reviewed for relevance. AG: Theoretical	5/13/2010	Academic Research (Journal Article)	Out of Place: "Knowing One's Place" and the exclusion of disabled people	Disability & Society, June 1998, 333-356	June 1998	University of Calgary HW1551 INTERNET	Disabled people are marginalized and excluded from "mainstream" life and history. In this paper, it is argued that space, as well as time, is instrumental in reproducing and sustaining disabled practices. Disability has distinct spatialities that work to exclude and marginalize disabled people in their place and 'written' to convey to disabled people that they are 'out of place'. Furthermore, social relations of power are used to illustrate how disabled people are excluded from the community. The author argues that disabled people are excluded from the community and that this exclusion is a result of their experiences of disability should be framed within an approach that recognizes the spatialities of disability. Unlike neo-Marxist approaches, this approach is centred on notions of power rather than capital. Using this approach, the spatialities of disability are explored.	background, theory

AC: Theoretical_UK	5/11/2010	Academic Research [Journal Article]	A positive outlook? The environmental values and needs of working age people with visual impairments	Disability & Society, Volume 19, Issue 7 December 2005, pages 661 - 675	December 2005	University of Calgary Library Call Number HV1551 INTERNET	This paper arises from research, funded by the Housing Corporation in the UK, which explored the housing needs and aspirations of a population that has received little public policy attention. We report on the housing circumstances and aspirations of 121 people living in the UK who have vision impairment that adversely affect their transition to independence, as well as their views on the housing needs of this population. The research also learned that this population has particular needs in relation to domestic and outside space, home location and safety and security measures. Furthermore, the interviewees indicated that specialist provisions non-institutional, stepping stones towards greater autonomy.	Discusses best-practice residential requirements for individuals with visual impairments.		
AC: Theoretical_UK	5/11/2010	Academic Research [Journal Article]	Contorted, Folded, Torn: Environmental Values, Needs and the Politics of Disability	Disability & Society, Volume 9, Issue 3 pages 329 - 374	1994	University of Calgary Library Call Number HV1551 INTERNET	This paper explores the merit of incorporating the personal geographies of individuals with impaired mobility into the production of geographic maps without first seeking to understand these geographies or map meanings. This becomes especially important if it is assumed that accessibility is inherently political. Cities are literally crisscrossed by members of their population are restricted from reaching their full potential. This paper attempts to develop a cartographic process which incorporates the values of the user group into all stages of map design. The project highlights the complex nature of environmental imagery and the merit of including symbolic cartographic representations of environmental values.	Discusses how individuals with disabilities experience the built environment with a unique set of concerns.		
AC: Theoretical_UK	5/11/2010	Academic Research [Journal Article]	Defining housing quality and standards and social factors	Housing Studies, Volume 19, Issue 5 pages 691 - 708	September 2004	University of Calgary Library Call Number HD7285 INTERNET	This paper considers quality standards and meanings of housing environments while discussing disability and housing. It challenges the current standards and suggests caution about the benefits of raising physical standards. After a brief introduction, comments are made on contemporary issues concerning standards, past difficulties arising from professional standards, and the need for a more holistic approach. There is then a discussion of the approach appropriate when drawing on the social model of disability, and the multi-dimensional nature of the home environment. This is followed by a discussion of housing quality standards, a number of factors potentially influencing consumer perceptions, indicating social dimensions of a good quality home and residential environment. AC: Theoretical_UK	5/12/2010	Academic Research [Journal Article]	Disability, embodiment and the meaning of the home	Housing Studies, Volume 19, Issue 5 September 2004, pages 745 - 763	September 2004	University of Calgary Library Call Number HD7285 INTERNET	While aspects of the home may provide for safety, security, privacy, and other aspects of their domestic habitation, such provisions are always conditional, contingent, never secure and likely to be challenged by, amongst other things, the onset and progression of disability. This paper explores the meaning of the home, and housing studies more generally, rarely consider the body and impairment and its interactions with domestic space. This is curious because impairment is a significant, and often long-term, condition that affects the way in which people experience and live in their homes. The paper develops the argument that a person's feelings about, and experiences of, the home cannot be dissociated from their corporeality or the organic matter and material of the body. Thus, the body and the home are inseparable and intertwined. The paper seeks to understand, in part, with reference to the body and conceptions of corporeality.	relevant bibliography to investigate (relevant entries NOT copied into "to review" bibliography)		
AC: Theoretical_UK	5/12/2010	Academic Research [Book]	Mind and body spaces: geographies of illness, disability and technology. Will technological innovation create the true lifetime home?	S. Butler & J. Parr (Eds) London: Routledge (1999)	1999	UPFC1 URSARY: HV1586 IM56 1999	Stacey highlights new international research from the US, Canada, Britain and Australia. bodily movement, mental health and disabled peoples social worlds. International contributors discuss a variety of current issues including the historical conceptions of the design and technological innovation and their ability to support older people in their own homes. It considers (1) innovation in the design of assistive technologies, (2) the introduction of electronically enhanced building systems; (3) the introduction of electronically enhanced assistive technology; and (4) telecare. Each of these is examined in terms of its potential benefits for meeting the housing needs of older people. The paper concludes that while technological innovation is likely to have a variable effect on the possible housing pathways of older people, depending on the way they are combined, it also outlines the policy and practice influences that may stimulate their use. The paper argues that the technology innovations must be matched by new care delivery models.	Copyright issues and table of contents scanned and saved on staff Computer Area. Architects and other professionals are not likely to train subordinates on unfamiliar construction methods unless they see immediate, short-term financial benefit. Architects and other individual homeowners are also reluctant to pay for such research by architects and other designers. Most research that is completed is generally reluctant to enforce too much legislation on the development and building industry. Currently, there is no legislation specifically addressing visibility in Canada. Only government funded public programs are available to assist persons with disabilities, but the single-family home is not part of this legislation. Sweden first started using the term 'visibility' in 1975. The concept of visibility was first used in the United Kingdom (Smart Housing), the United States and finally Canada. Research shows that the majority of visible housing has been built with financial assistance from one or more sources.	The article describes a Canadian home conversion for a person with a physical disability and current Canadian practices on visibility and current Canadian practices. 	6/15/2010	Current Practice [Guidelines]	Larch Park Guidelines	Metcor Developments LTD	2010 (ongoing)	http://www.metcor.ca/visability.html	"Larch Park at McGrath" is a community in the southwest of Edmonton for which we have developed a set of guidelines for individual builders to conform to. Metcor developments has taken on the parallel initiative of sustainable homes and communities. Their building guidelines they advise having zero-step entries. For the zero-step entries they estimate it tends to be better to the zero-step entry. Based on an estimate from the community maps with the lot plans, there are approximately 138 single family homes that will be built to these guidelines.	We researched 14 other residential communities near Larch Park and this is the only one with visability requirements.	Precedent, Development, Guidelines, Edmonton	
PR: Organization Opportunity, Parallel Initiative, Non-government, Canada	7/13/2010	Academic Research [Report]	The National Scene	Canadian Home Builder's Association (CHBA)	June 2010	http://www.chba.ca/updates/news/NatScene_June_2010.pdf	This is a monthly update published by the CHBA. There is a short paragraph on "Accessibility and Barrier-Free Design". It is as follows: "Accessibility and barrier-free design was a prominent theme in both national and provincial committees held last month in Ottawa. It represents a growing market opportunity with approximately 4.4 million Canadians, or 11% of the population, aged 65 and over. In another 20 years, it will be 17%. The CHBA is currently working on a position paper on housing accessibility and visability and to begin work on the development of a "best practices" guide for the industry. At the same time, provincial governments are now engaged in reviewing their building code requirements to improve accessibility. The TRC will be working to improve accessibility. We face a complex web of economic, social, cultural and environmental challenges in our communities. We feel unsettled and overwhelmed yet we are also energized by a sense of possibility and opportunity. Our communities are constantly changing, building resilient people and resilient communities is vital. We are inventive, resourceful, creative, skillful and clever people who notice what is happening in our communities and we gather to draw on our diversity of perspectives: as professional planners, aspiring planners, community developers, builders, community and community development professionals, and anyone who works or volunteers for change in our communities. We are designing a conference experience with this assumption in mind: determine concretely how to act on them.	This paragraph, though short, informs us that the topic of Visability is on the CHBA's radar and that they will be producing a report and best practice guide probably within the next 1-2 years. Appendices — d. Legislative time-line and framework table

d. Legislative time-line and framework table

The following table is the compilation of all legislative documents and references found during the Environmental Scan phase of this project.

Some of the entries into the table are incomplete. The primary source for those entries could not be found. They were included in the table because they were referenced on third party documents and could later be searched for further information. These entries are labeled as “could not find primary source”.

Legend/Table headings

Legislation/Regulation (details)

- Name
- Country (of origin)
- Year (when it was established)
- Day and Month (when it was established -if available)
- Jurisdiction
- Law, Ordinance or Incentive Program
- Enacted / Proposed
- Location (where is implemented)
- Legal Name
- Types of Housing (where is implemented)
- Subsidize Housing / All Housing (where is implemented)
- Mandatory / Voluntary
- Enforcement (enforced by)
- Source / Link

Features (that the document includes in its' regulation)

- Entrance to Home
- Interior Doors and Accessible Route
- Bathroom

Name	Features	Interior Doors & Accessible Route	Bathroom	Light switches, thermostat, electrical outlets, electrical panel, etc.	Added Features	Geographic/Topographic Considerations	Notes
Fair Housing Amendments Act of 1988	Entrance to Home Accessible route into and through dwelling	Doors designed to allow passage by disabled persons and contain an accessible route into and through unit	reinforcements in bathroom walls, usable kitchens and usable bathrooms such that an individual in a wheelchair can maneuver in the space	Light switches are in accessible locations	Kitchens are maneuverable by a wheelchair accessible common areas		In 1988 and 1991 the National Association of Home Builders (NAHB) actively sought to limit the scope of the guidelines by restricting them to such a level as to not significantly impact cost of production. They successfully were able to water down the guidelines, which to this day are criticized for guaranteeing only minimal access. The FHAA guidelines are an improvement in comparison to the lack of regulations prior to the law. However, they do not even require such inexpensive features as grab bars. (Aging in Place, Housing and The Law, Jon Pynoos, Elderly Law Journal)
Florida Bathroom Law	Not specified	Not specified	Provide at least one bathroom, located with maximum possible privacy, where bathrooms are provided on habitable grade levels, with a door that has a 29-inch clear opening.	Not specified			
Americans with Disability Act Barrier Free Requirements	Not Applicable At least one building entrance on an accessible route served by a ramp complying with ANSI A117.1-1998 with a minimum clear opening of 32"	Not Applicable Doors designed to allow passage into and within all premises are sufficiently wide to allow passage of persons in wheelchairs. Doors intended for passage must provide a minimum 32" clear and a 2'-10" door or standard 6'-0" sliding patio door is deemed sufficient to comply with this requirement. Accessible routes shall be 36" wide through the main floor of the unit.	Not Applicable Reinforcement in the walls shall be provided at designated locations as specified by ANSI 117.1.	Not Applicable	Lever hardware required.		
Accessibility in Housing Act Public Funds	At least one building entrance that complies with the Municipal or State Building Code standard for accessible routes served by a ramp or no-step entrance. A building entrance door must have a minimum net clear opening of 32". One no-step entrance	Interior doors located on the first floor of a building shall have a minimum clear opening of at least 30". A 2'-8" or 2'-9" sliding patio door assembly complies with this requirement.	First floor bathroom walls must be designed and constructed with reinforcements.	A switch or electrical panel located on the first floor must be no higher than 42 inches above the floor; receptacles must be at least 18 inches above the floor.	Lever hardware required.		Ordinance copies Atlanta, Georgia's ordinance
Income tax credit; certain homes with accessibility features	One no-step entrance	32" clear doorways throughout dwelling	Reinforcements in bathroom walls	Light switches and outlets placed in accessible locations.			
Construction Requirements for Single-Family Affordable Housing	At least one building entrance on an accessible route served by a ramp or no-step entrance	Each door be at least 32", and each hallway has a width of at least 36"	Each bathroom wall is reinforced	A switch or electrical panel located on first floor must be no higher than 42 inches above the floor; receptacles must be at least 15 inches above the floor.			
Georgia Single-Family Basic Access Bill	At least one building entrance on an accessible route served by a ramp or no-step entrance	Each door be at least 32", and each hallway has a width of at least 36"	Each bathroom wall is reinforced	A switch or electrical panel located on first floor must be no higher than 42 inches above the floor; receptacles must be at least 15 inches above the floor.			Follows same structure as State of Texas Law
Visibility Code	At least one building entrance to have an accessible entrance on an accessible route, 36" path, that is served by a ramp or no-step entrance.	All doors and openings shall have a minimum net clear width of 32" and corridors shall be 36".	Each bathroom wall is reinforced.	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48 inches from the floor and no lower than 15 inches above the floor.	Exterior accessible route surface to be non-slip.		
could not find primary source Visibility Requirement	One no-step entrance	32" clear doorways throughout dwelling	One half bath on main level	Not specified			Information currently gathered is from internet sources and need to look into further to find legislation source.
could not find primary source							Agency may waive no-step entry if site conditions make the requirement impractical. Information currently gathered is from internet sources and need to look into further to find legislation source.

Name	Features	Interior Doors & Accessible Route	Bathroom	Added Features	Geographic/Topographic Considerations	Notes
could not find primary source Universal Design and Construction Requirements for New Single-Family Homes, Duplexes and Triplexes Build with Funds Administered by the Municipal of San Antonio Universal Design	Entrance to Home At least one building entrance to have an accessible route. A path that is served by a ramp or no-step entrance. A building entrance door must have a minimum net clear opening of 36".	Interior Doors & Accessible Route All doors and openings shall have a minimum net clear width of 32". All building entrances on the main floor shall be at least 36" wide.	Bathroom Bathroom walls reinforced around toilet, shower and tub in accordance with the Fair Housing Act	Light switches, thermostats, electrical outlets, electrical panel, etc. A switch or electrical panel located on the floor must be no higher than 48 inches above the floor; receptacles must be at least 15 inches above the floor.	Information currently gathered is from internet sources and need to look into further to find legislation source.	
Visiblity of Dwelling Units	An accessible route that can be negotiated by a person using a wheelchair shall be provided that connects the accessible entrance to the sidewalk, garage or driveway such that the affected dwelling unit can be entered from the public right-of-way.	All doors on the ground floor (including bathrooms, walk-in closets, and any door intended for human passage) shall have at least a 32 inch clear opening. All hallways and room entrances on the ground floor shall be at least 36 inches wide for an accessible route through the dwelling.	Bathroom: There shall be at least 1/2 bathroom (powder room) located on the ground floor, and it shall be designed with thoughtful arrangement of fixtures or sufficient floor space to allow an individual using a wheelchair or other mobility aid to enter and close the door, use the fixtures, reopen the door and exit.	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48 inches from the floor and no lower than 15 inches above the floor.	Different criteria exists for senior housing and single family dwellings receiving funding from the Town of Southampton	
Naperville, Illinois, Code of Ordinances	Not implemented	An affected dwelling unit must provide an accessible route through the hallways and passageways of the first floor of the dwelling unit. The route must provide a minimum width of thirty-six inches (36") and be level with ramped or beveled changes at door thresholds, except that sunken or raised areas shall be permitted when an accessible route that connects a portion of the living or family room, bathroom, and the accessible entrance door is provided.	At least one bathroom, consisting of at least a toilet and a lavatory, must be provided on the first floor of an affected dwelling unit.	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48 inches from the floor and no lower than 15 inches above the floor.	One of first cities to implement all new residential legislation, the other is Prima County, Arizona	
Inclusive Home Design Ordinance	At least one building entrance on an accessible route served by a ramp or no-step entrance.	All doors and openings shall have a minimum net clear width of 32" and accessible paths shall be 36".	Bathrooms off of an accessible route shall have wood blocking	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48 inches from the floor.	One of first cities to implement all new residential legislation, the other is Naperville, Illinois.	
Pittsburgh Visiblity Design	At least one building entrance on an accessible route served by a ramp or no-step entrance. A building entrance door must have a minimum net clear opening of 32".	All doors and openings shall have a minimum net clear width of 32" and accessible paths shall be 36".	Provide a bathroom or half-bath on the main floor. All walls in the required bathroom shall be reinforced with blocking in the walls to allow for future installation of grab bars.	Lever door handles on accessible route. Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48 inches from the floor.		
Kansas House Bill 2020	At least one building entrance to have an accessible entrance on an accessible route no less than 36" wide, that is served by a ramp or no-step entrance. Exit door at least 32".	All dwelling units, whether or not on an accessible route, shall be designed in such a manner that the doors be sufficiently wide to allow passage into and within all premises by persons in wheelchairs. Doors, except those serving closets less than 15 square feet in area, within individual dwelling units intended for user occupancy shall be designed to have a clear opening of 32 inches. An accessible route located on the same floor on which the accessible entrance is located shall be designed and constructed in such a manner that a 36" wide route is provided.	Bathrooms located on the same floor on which an accessible entrance is located must be provided with blocking.	All wall switches, controlling light fixtures, fans, all temperature control devices and all receptacles shall be located in an area between fifteen (15) and forty-eight (48) inches above finished floor.

ACCESSIBILITY IN HOUSING CONSTRUCTED WITH PUBLIC FUNDS	Dwelling units shall be designed and constructed to have at least one no-step accessible route	Dwelling units shall be designed and constructed to have doorways within the dwelling units intended for user passage, except those serving closets less than 15 feet square in area, that provide a minimum 32 inches clear opening. (615 inches wide by 80 inches high) and all units shall be designed and constructed so that all hallways and passageways on the first floor of the dwelling unit shall be a minimum of 44 inches in width.	bathroom or powder room on the first floor of a dwelling unit shall be designed in such a manner to allow sufficient clear floor space for a rectangle measuring 30 inches wide by 48 inches long (as measured from the center of the door) to be introduced and allow the door to be closed.	All light switches, electrical outlets, thermostats and other controls shall be placed in accessible locations which provide a clear path to reach ranges as set forth in the Florida Building Code, Light switches, thermostats, or electrical panels shall not be higher than 48 inches above the floor. Electrical outlets shall be at least 15 inches above the floor. Any electrical panel located outside the dwelling unit shall be no higher than 42 inches above the ground, at least 16 inches above the ground, or adjacent to an accessible route.	Bathroom walls on the first floor of a dwelling unit which adjoin a bathroom, a shower, or a shower pan shall be constructed with reinforcement with blocking of at least 2 inch by 8 inch (nominal) dimensional lumber between the studs in the walls at the locations required by Sections 11-4.16.4, 11-4.20 and 11-4.21, Florida Building Code, as amended.	The Building Official may waive any requirement of Section 17.5-31 of this article if the article demonstrates that the conditions of a site with that requirement an undue hardship.	As of April, 2010, 114 permits have been issued to residence under this ordinance over a three year period; totaling values of over \$4.2 million.
New Home Universal Design Checklist	list of voluntary items for inclusion	list of voluntary items for inclusion	list of voluntary items for inclusion	list of voluntary items for inclusion	list of voluntary items for inclusion		This law makes it mandatory for developers to present a homeowner a list of universal design features that they can then choose to be incorporated into the new construction of a residential building of any kind.
Subsidized Development Visibility	At least one building entrance to have an accessible route no less than 36" wide, that is served by a ramp or no-step entrance. Exit door at least 32". At least one visible common living space.	One or more visible routes.	A powder room doorway on a visible route with minimum door clearance of 32" and blocking in walls.	All switches at a reachable height.	At least one visible common living space within dwelling unit. A shared community room and at least one powder room if there are more than 20 contiguous units.		
Visibility	At least one no step entrance on a visible route.	All doors and openings shall have a minimum net clear width of 32". All hallways and corridors on the main floor shall be at least 36" wide.	Provide a bathroom or half-bath on the main floor. All walls in the required bathroom shall have reinforcing blocking in the walls to allow for future installation of grab bars.	Wall electrical outlets on the main floor shall be mounted on the main floor shall have a space of 30" by 48" finished for electrical switches, thermostats, and other control devices on the main floor shall be mounted no higher than 48" above the finished floor.			
Barrier Free Construction	Applicable dwelling units shall be designed and constructed to have at least one building entrance on an accessible route served by a ramp or a slope. This entrance should have an accessible door.	All dwelling units, whether or not on an accessible route, shall be designed in such a manner that the doors be sufficiently wide to allow passage into and within all premises by persons in wheelchairs. Doors, except those serving closets less than 15 square feet in area, within individual dwelling units intended for user passage must provide a minimum clear opening of 32 inches.	Wall reinforcement in bathrooms. Reinforcement in the walls shall be provided at designated locations as specified by the American National Standards Institute (ANSI) for future grab bar installation. Usable first-floor bathroom with wheelchair maneuvering clearances.	All applicable dwelling units shall be designed and constructed in such a manner that all premises contain light switches, electrical outlets, thermostats and other controls in accessible locations, no higher than 48 inches and no lower than 16 inches from the floor.			Also mandates: Usable first-floor kitchen with wheelchair maneuvering clearance

Name	Features	Interior Doors & Accessible Route	Bathroom	Added Features	Geographic/Topographic Considerations	Notes
The Inclusive Home Design Act	Entrance to Home At least one zero-step entrance on an accessible route at the front, side or back of the home, or through an attached garage — wherever is most feasible for the given terrain.	Interior Doors & Accessible Route All interior passage doors on the main floor of the home providing a minimum of 32 inches of clear passage space.	Bathroom A useable bathroom with at least a toilet and sink on the main level. Blocking in bathroom walls (but not grab bars)	Light switches, thermostat, electrical panel, etc. Electrical and climate controls such as light switches, sockets and thermostats located at reachable heights.	Geographic/Topographic Considerations	Notes This bill never became law. This bill was proposed in a previous session of Congress. Sessions of Congress last two years, and at the end of each session all proposed bills and resolutions that haven't passed are cleared from the books. Members often reintroduce bills that did not come up for debate under a new number in the next session. This bill was re-introduced as H.R. 1408: Inclusive Home Design Act of 2009, on March 10, 2009. Cites cost as: For homes built on a concrete slab, \$98; For homes with a basement or crawl space, \$573
Accessibility Standards; Residential Construction, Act 88	At least one first floor exterior door that is at least 36 inches wide.	Interior Doors & Accessible Route First floor interior doors are at least 34 inches wide or open doorways that are at least 32 inches wide. Interior hallways at least 36 inches wide.	Bathroom Bathroom walls to be reinforced.	Light switches, electrical outlets, thermostats and other environmental controls in accessible locations. All applicable dwelling units shall be designed and constructed in such a manner that all switches, electrical outlets, thermostats and other controls in accessible locations.	Geographic/Topographic Considerations An "Exterior Disability Accessibility Waiver" application shall be required for any topographical conditions on the site render it either impossible or impracticable to comply with the provisions of said section.	Notes
Requirements for Publicly Funded Residential Construction to Accessibility and Occupancy by Disabled Persons	Applicable dwelling units shall be designed and constructed to have at least one building entrance on an accessible route served by a ramp or no-step entrance that is at least 32 inches wide. Any entrance at the front, side or back is accessible as long as it is served by an accessible route such as a garage or sidewalk.	Interior Doors & Accessible Route All dwelling units, whether or not on an accessible route, shall be designed in such a manner that all doors are designed to allow passage by persons in wheelchairs. An accessible route shall be designed and constructed in such a manner that a thirty-six-inch-wide level route, except at doors, must be provided through the main floor of the unit with ramped or beveled changes at door thresholds.	Bathroom Reinforcement in the walls shall be provided at designated locations as specified in Section 4.24, Section 4.32, and Section 4.49 so that grab bars may be installed, if needed, at a later date without the necessity of removing portions of the existing wall.	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48.	Geographic/Topographic Considerations	Notes
The Residential VisiAbility Design Tax Credit Act	At least one building entrance to have an accessible entrance on an accessible route, that is served by a ramp or no-step entrance. Exit door at least 32".	Interior Doors & Accessible Route All doors and openings shall have a minimum net clear width of 32" and corridors shall be 36".	Bathroom Provide a bathroom or half-bath on the main floor. All walls in the required bathroom/half bath shall have reinforcing backing in the walls to allow for future installation of grab bars. Plumbing fixtures must be equipped with lever-style hardware.	Lever door handles on accessible route. Bathroom or half-bath on the main floor shall have a clear floor space of 30" by 48".	Geographic/Topographic Considerations	Notes
Inclusive Home Design Act	Not specified	Interior Doors & Accessible Route Not specified	Bathroom Not specified	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48.	Geographic/Topographic Considerations	Notes
Residential VisiAbility Design Tax Credit Program	At least one building entrance to have an accessible entrance on an accessible route no less than 36" wide that is served by a ramp or no-step entrance. Exit door at least 32".	Interior Doors & Accessible Route All doors and openings shall have a minimum net clear width of 32" and circulation paths shall be no less than 36".	Bathroom At least one powder room or full bathroom on visible level and shall have blocking.	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48.	Geographic/Topographic Considerations	Notes
Housing Accessibility	Accessible entries and common areas (refer to code for extensive universal design specifications)	Interior Doors & Accessible Route Wider doors and halls and within dwelling (refer to code for extensive universal design specifications)	Bathroom Accessible Bathrooms (refer to code for extensive universal design specifications)	Light switches and other environmental controls (refer to code for extensive universal design specifications)	Geographic/Topographic Considerations	Notes

Name	Features	Interior Doors & Accessible Route	Bathroom	Light switches, thermostat, electrical outlets, electrical panel, etc.	Added Features	Geographic/Topographic Considerations	Notes
Visit-Ability Program	Entrance to Home Zero-step entrance	All doors and openings shall have a minimum net clear width of 32".	modifications are minimum 32" door openings and bracing in the bathroom walls so grab bars could be installed if necessary	Not specified			Developers in Visalia, California receive a "Visit-ABLE" logo to place on new homes that comply with visitability requirements. Little information is available on the Municipal of Visalia's website, although a Municipal council agenda states: "During the development process staff concluded that the program could not be made mandatory under the provisions of the Uniform Building Code. There was specific code language in the UBC to provide for more restrictive code changes; however the language referred to modifications to the code requiring that the governing body make express findings showing that such modifications are reasonably necessary due to local climactic, geological or topographical conditions. At the time this voluntary program was enacted, staff did not believe that those findings could be made and Council agreed."
Inclusive Home Design Ordinance	At least one building entrance on an accessible route served by a ramp or no-step accessible route.	All doors and openings shall have a minimum net clear width of 32" and accessible paths shall be 36".	Bathrooms off of an accessible route shall have wood blocking	Light switches and other environmental controls are preferred, but not required, to have operable parts located in accessible locations, no higher than 48 inches from the floor.			
Visitability Standards	No step entrance. There shall be at least one entrance (front, side, rear, or through the garage) which has no steps and is served by walks and/or ramps meeting the specifications of law and ordinance. The required no step entrance shall be accessed via a visitable route.	All doors or openings (with the exception of closet and pantry doors) shall have a minimum net clear width of 32 inches. Corridors shall be at least 36 inches in width.	At least one-half bath shall be required upon the same level as the no step entrance. Each bathroom or other room, upon the same level as the no step entrance, which contains a toilet, bathtub, shower stall, or shower seat, shall have reinforcing in the walls to allow for future installation of grab bars around those fixtures.	Wall electrical outlets, light switches, thermostats and other control devices shall be mounted between 15 inches and 48 inches above the finished floor.		In cases where site conditions or other restrictions warrant, waivers from this Code may be granted by the city council after consideration of the installation of the visitability review committee.	
Inclusive Home Design Act of 2009	At least one building entrance to have an accessible entrance on an accessible route, 36" path, that is served by a ramp or no-step entrance.	All doors and openings shall have a minimum net clear width of 32".	At least one bathroom that contains minimum clear floor space of 30"x48", an accessible sink and toilet, reinforced walls.	A switch or electrical panel located on first floor must be no higher than 48 inches above the floor; receptacles must be at least 15 inches above the floor.	If controls are above a counter or appliance they must be no more than 3 inches above surface.		Also requires "Habitable Space" - at least one indoor room that has an area not less than 70 square feet and contains no side or dimension narrower than seven feet.
Visit-ability Code	At least one building entrance must be designed with an accessible route served by a ramp in accordance with section R311.8 or a no-step entrance. The entry door must have a minimum net clear opening of thirty-two inches (32").	At least one bedroom, one bathroom and all other passage doorway header widths, on the level served by the designed step-less entrance, must be framed to accommodate a minimum 38" clear rough opening.	There must be at least one bathroom containing a shower, water closet (toilet) and lavatory (sink) and either a shower, bathtub, or combination bathtub located on the level of the dwelling to be accessed by a step-less entrance. Exception: 1. If bathroom design allows a proper shower or combination tub/shower can be provided within the room or an adjoining room than the shower or bathtub is not required. 2. The building official may waive this requirement based on the determination that strict compliance is financially impractical.	All wall switches, controlling light fixtures, fans, all temperature control devices and all receptacles shall be located in an area between fifteen (15) and forty-eight (48) inches above finished floor.			
Waiver of Building Permit Fees	Not specified	Not specified	Not Specified	Not specified			Certain sources say this fee waiver was implemented in 1997 and it looks like it was amended in 2009. There are two contradictory notes. Note A states "no person shall be charged a design solely to promote accessibility." Note B states "a disabled person.... shall be required to pay a municipal fee in a design solely to promote accessibility." Note C states "the fee may be made to add the contradictory note so that it is up to the discretion of the municipality."

Approved Document M - Access to and Use of Buildings	A level or ramped approach to the house which is at least 900 mm wide. An accessible threshold at the entrance to the house. An entrance door which provides a minimum clear opening of 775 mm.	Corridors and hallways in the entrance storey sufficiently wide to allow circulation by a wheelchair user.	A toilet in the entrance storey which wheelchair users can access.	The provision of lifts in flats is not a requirement. Where a lift is provided in flats, a minimum lift capacity and dimensions will be recommended. Where a lift is not provided, the common stair to be designed to suit the needs of ambulant disabled people. N.B. the provisions apply to flats as well as houses	The provision of lifts in flats is not a requirement. Where a lift is provided in flats, a minimum lift capacity and dimensions will be recommended. Where a lift is not provided, the common stair to be designed to suit the needs of ambulant disabled people. N.B. the provisions apply to flats as well as houses	No changes of level on the entrance storey apart from on steeply sloping sites.		
Code for Sustainable Homes	(4) Entrances All entrances should: 4a) be illuminated 4b) have level access over the threshold and 4c) main entrances should be covered.	"Corridors and hallways in the entrance storey sufficiently wide to allow circulation by a wheelchair user."	(10) Entrance Level WC & Shower Drainage There should be: a) A wheelchair accessible entrance level WC, with b) Drainage provision enabling a shower to be fitted to be fitted in the future.	(16) Controls, Fixtures & Fittings Switches, sockets, ventilation and service controls should be at a height usable by all (i.e. between 450mm and 1200mm from the floor).	(16) Controls, Fixtures & Fittings Switches, sockets, ventilation and service controls should be at a height usable by all (i.e. between 450mm and 1200mm from the floor).	The Design Criteria forming the Lifetime Homes standard relate to interior and exterior features of the home. There are a total of 16 Design Criteria.	On 13 December 2006, the Code for Sustainable Homes - a new national standard for sustainable design and construction of new homes - was launched. The requirement for sellers to give a sustainability certificate (either a Code for Sustainable Homes certificate or a nill-rated certificate) to buyers of newly constructed homes has been suspended as of May 2010. Lifetime Homes concept is incorporated under the "Health and Wellbeing" criteria within the UK's Code for Sustainable Homes. The Lifetime Homes 16 design criteria aim to produce homes that are accessible to a wide range of occupants and are suitable for a wide range of needs of a household. The Code for Sustainable Homes is currently under review for incorporation into Part L of the Building Code.	This act was set in place to establish the Disabled Persons Commission that is a body of 12 people who give representation in government policies and programs for disabled people within the provincial government of Nova Scotia. They seek to: promote the concerns of persons with disabilities within the government itself, particularly when a policy affects more than one government department, educate both the Coordinating Committee of Ministers and the general public on the needs and abilities of persons with disabilities, promote information about programs and services that serve persons with disabilities, review, evaluate, and recommend programs and services that they are appropriate and effective, and that they reflect the needs and concerns of persons with disabilities and make the general public aware of what it can do to facilitate the integration of persons with disabilities into the social and economic mainstream of the community

The Ontario Human Rights Code	Entrance to Home not specified	not specified	not specified	not specified	not specified	not specified	The Ontario Human Rights Code (the "Code") is for everyone. It is a provincial law that gives everybody equal rights and opportunities without discrimination in specific areas such as jobs, housing and services. The Code's goal is to prevent discrimination and harassment. The Code was one of the first laws of its kind in Canada. Before 1962, various laws dealt with different kinds of discrimination. The Code brought them together into one law and added some new protections. This is a very misleading amendment to the code. It specifies certain aspects of barrier free design only to be overruled by later clauses within the code. For example buildups of residential occupancy that fall within the scope of Part 9 of the NBC 1995 are exempt from the requirement for including barrier-free suites. And in Article 38 of the NBC 1995, it states that semi-detached houses, townhouses, row houses and boarding houses, if all of those are exempt, where does this article apply to? And at that only one unit or 5% are mandatory accessible?
Barrier Free Requirements in Residential Design	not specified	minimum 810mm door	one bathroom off of a 860mm hallway, minimum clear floor space of 1500mmX1500mm, grab bars installed, with universal design fixtures		Balconies to be barrier-free, bedroom to have a clear turning circle of 1500mm		
Adaptable Design Requirements	Level 1 & 2: Unobstructed access to main building entrances from street/sidewalks	Level 1 & 2: Corridors minimum 4' or 1220mm wide (except for service access areas)	Level 2 Only: Provide turning radius within bathroom (may result from removal of vanity cabinet)				
FlexHousing	The no-step, no-trip entry of the home should have no change of level greater than 19 mm (¾ inches). The door should be between 860mm and 910 mm wide (34 inches to 36 inches).	Hallways should be 1,200 mm (4 feet) wide.	In a FlexHouse, a bathroom should always be located on the main floor.		Flexhouse guidelines for the following areas: Parking and Entrances; Hallways; Stairs; Kitchens; Bath; Kitchen; Living Room/Family Room; Bedroom; Laundry Room; Habitable Attics; Balconies		FlexHousing™ is a practical approach to designing and building housing that allows residents to convert space to meet their changing needs. Based on the principles of adaptability, accessibility, affordability and healthy housing, FlexHousing integrates the best practices from the Ontario Building Code's Electronic Document - "The Cost of FlexHousing" discusses the costs of constructing and retro-fitting a flexhouse.
Ontarians with Disabilities Act (ODA), 2001	not specified	not specified	not specified	not specified	not specified		The purpose of the ODA is to improve opportunities for people with disabilities through identification, removal and prevention of barriers to participation in the life of the province. The new legislative requirements set out standards that all municipalities must follow to ensure that existing barriers for people with disabilities are removed over time and that no new barriers are created. Accessibility advisory committees, 12. (1) The council of every municipality having a population of not less than 500 shall establish an accessibility advisory committee and the council of every municipality having a population of less than 10,000 may establish or continue an accessibility advisory committee. Duty of council (4) The council shall seek advice from the committee on the accessibility for persons with disabilities to a building, structure or premises, or part of a building, structure or premises, (a) that the council purchases, constructs or significantly renovates; (b) for which the council enters into a new lease; or (c) that a person provides as municipal capital facilities under an agreement entered into with the council in accordance with section 110 of the Municipal Act, 2001 or section 252 of the City of Toronto Act, 2006, as the case may be. Functions (5) The committee shall, (a) perform the functions set out in this section, including the preparation of the drawings and specifications described in section 41 of the Planning Act that the committee selects; and

Accessibility Design for the Built Environment	Entrance to Home	Interior Doors & Accessible Route	Light switches, thermostat, electrical outlets, electrical panel, etc.	Not Available	Not Available	Not Available	The Canadian Standards Association is a not-for-profit membership-based association serving business, industry, government and consumers in Canada and the global marketplace. As a solutions-oriented organization, the CSA works to develop standards that address real needs, such as enhancing public safety and health. This Standard contains requirements for making buildings and other facilities accessible to persons with a range of physical, sensory, and cognitive disabilities. It was developed to fulfill an expressed need for a national technical standard that covers many different types of building and environmental facilities and that can be referenced in whole or in part by a variety of adopting authorities. Contains section on 'visitable dwelling units'.
Advisory Board On Services For Persons With Disabilities Bylaw (ABSPPD) VOLUNTARY DESIGN GUIDELINES FOR ADAPTABLE HOUSING	Not Specified	Not Specified	Not Specified	Not Available	Not Available	Not Available	The purpose of this bylaw is to establish the Advisory Board on Services for Persons with Disabilities and to prescribe powers, duties, functions, structure and procedures. They are an advocacy group and advice city council on issues with disability. The Voluntary Design Guidelines for Ground-Oriented Housing suggest features that would provide better adaptability and accessibility in single family and townhouses beyond that required by the BC Building Code and Saanich's Basic Adaptable Housing requirements. Use of the guidelines is voluntary.
Accessibility for Ontarians with Disabilities Act (AODA), 2005	not specified	not specified	not specified	not specified	not specified	not specified	Under the Accessibility for Ontarians with Disabilities Act, 2005, the Minister of Community and Social Services is required to establish an accessibility standards advisory council. The council is an advisory agency. Its mandate is to advise the minister on the development of accessibility standards and on sector-specific and general public education programs to support the effective implementation of the AODA. The council will play a key role in helping to guide Ontario as it moves towards achieving the government's vision of an accessible society over the next 20 years. On December 13, 2005, the Minister of Community and Social Services appointed the members of the Accessibility Standards Advisory Council of Ontario. The council includes a cross-section of leaders from the disability community and the private and broader public sectors, with the majority of members being people with disabilities. Council members are appointed by the minister for a term of up to three years.
Universal Design and Barrier-Free Access Standards for DND/CF Facilities [Section within the Construction Engineering Technical Order (CELO)] Federal Disability Act	An accessible route from the street or sidewalk shall have a width of at least 1200mm, and entrance landing of at least 2250x2250mm	Corridors on the visible floor shall be at least 1200mm wide for all buildings.	A clear route to a bathroom should be at least 1200mm wide	not specified	not specified	not specified	The Federal Disability Act is a proposed national law trying to be implemented by the Council of Canadians with Disabilities. They outlined a possible framework bill that would enhance the Canadian Human Rights Act. There are no specifics on visitability, but more in general housing is outlined for universal access.

Disability Action Plan Strategy	Entrance to Home Not Available	Not Available	Not Available	Not Available	Not Available	Not Available	This outlines a strategy to implement accessibility through policy, incentives, programs and possible legislation within the province. There are general objectives of universal design. The objectives for housing are: to increase the number of accessible and affordable housing units in the province; to promote the concept of universal barrier free design concepts in all new housing projects including renovations of existing housing stocks where feasible; to create different housing options with disability supports required for certain youth and adults as an alternative to premature placements in nursing homes.
Aging in Place: A Neighbourhood Strategy	at least one no-step entrance	doors and hallways wide enough for wheelchair navigation	one bathroom on the first floor big enough to get into with a wheelchair and close the door.				
Visibility of Affordable Housing Units	A zero-step entrance at the front, back or side entrance of the house (located on an accessible route from the street)	Wider Doorways on all main floor doors (minimum 813 (32") clear door opening)	A half bath on the main floor (minimum requirements include a sink, toilet and a wider doorway)				
Access-A-Home Program	not specified	not specified	not specified	not specified	not specified	not specified	The purpose of the Access-A-Home-Program is to provide assistance to participants with the removal of architectural barriers to make the housing wheelchair accessible.
City Housing Strategy 2007-2012	Level or gently sloping approaches to dwellings, level no-step access to entry door	sufficiently wide doors, 32" to 36" and corridors, 36", to accommodate a wheelchair	multi-level units, a ground floor toilet facility for wheelchair users and the elderly and a ground floor family room and/or kitchen facility.	not specified	not specified	not specified	The city strategy is to "develop policies and initiatives encouraging an increase in accessible housing for persons with disabilities, ensure the inclusion of accessible units and visible designs in City-sponsored programs and projects, encourage the development of private sector housing developers to develop housing that is accessible to people with a diversity of physical disabilities, advocate for federal and provincial government initiatives that support an increase in accessibility to the existing stock of housing.
Prince George Visible Housing Declaration	At least one zero-step entrance on an accessible route	Doorways throughout with no less than 32" clear width	At least a half bathroom on the main floor with the wider doorway.				This declaration came after the "Measuring Up the North" Conference held in April 2009. The declaration was meant for all the 175 delegates that participated in the conference. The delegates included researchers, planners, realtors, elected officials, building officials, government officials, local and provincial government personnel, seniors and disability advocates, universal design practitioners, non-profit organizations, health professionals, students and others. The Declaration of Adaptive Design for Accessible Housing (Bylaw on page 86 contains visibility criteria.
Accessible Community Bylaws Guide	An accessible path of travel. A no-step entrance	A passable interior circulation	An access to a main floor washroom		Has section on "Enhanced Visibility Features"		
Accessible Built Environment Standards	exterior ramp; accessible entrance; door width and sill and threshold; door levers; power door openers for multi-unit buildings	interior mobility within a unit; accessible main floor washroom within a unit; kitchen size, access and adaptability	spacing and location of electrical switches, outlets and other controls, including power outlet over main entrance to support installation of power door openers				The Ontario Human Rights Commission (OHRC) has reviewed the initial proposed Accessible Built Environment Standard prepared by the Accessible Built Environment Standards Development Committee pursuant to the Accessibility for Ontarians with Disabilities Act (AODA). The proposed Standard sets out specific accessibility requirements for 11 groups of built environment elements, with new construction to apply within one year, and existing to be extended to apply within five to thirteen years. Housing is specifically set apart in Section 13 of this standard. There is only a discussion on these requirements instead of a listing of the standard. A final proposal of the standard was expected to be completed and submitted to the minister in Spring 2010. The government will review the committee's proposed standard and it may be adopted into regulation in whole, in part or with modifications.

Funding is provided jointly by the Government of Canada (75%) and the Province of Nova Scotia (25%). Modifications must be related to housing and be reasonably related to the disabled occupant's disability.</p>		
<p>Ontario Building Code - Visitable Apartments</p>	<p>Barrier-free path of travel from the suite to the entrance door</p>	<p>Barrier-free path from doorway to at least one bedroom on same level</p>	<p>barrier-free path from doorway to at least one bathroom on same level, not having area less than 4.5 sq.m. with a minimum door width (specified in other clause not available)</p>	<p>not specified</p>	<p>not specified</p>	<p>Sentence 3.8.2.1 (4) In Group C major occupancy apartment buildings, not less than 10% of all residential suites shall be provided with a barrier-free path of travel from the suite entrance door to, a) the doorway to at least one bedroom on the same level, and b) the doorway to at least one bathroom. 1) having an area not less than 4.5 sq.m. at the same level and 1) conforming to clause 3.9.8.3.3 (1). [which specifies minimum clear width at door]</p>		
<p>Visitable and Adaptable Features in Housing Regulatory Impact Statement</p>	<p>a clear path from the street (or car set-down/park) to a level entry</p>	<p>wider doorways and passages</p>	<p>a toilet suitable for people with limited mobility on the entry level; and reinforced bathroom walls to allow grab rails to be fitted inexpensively if they are needed later.</p>	<p>not specified</p>	<p>not specified</p>	<p>he Victorian Government has made a policy commitment to ensuring that people with a disability or limited mobility will not be excluded from participating in social life and work. Four accessibility features have been identified which, if included in new homes, would have a major accessibility impact for people with a disability and for the wider community. The features are: a clear path from the street (or car set-down/park) to a level entry, wider doorways and passages; a toilet suitable for people with limited mobility on the entry level; and reinforced bathroom walls to allow grab rails to be fitted inexpensively if they are needed later. The Victorian Government's policy objective is to achieve a high degree of adoption of these four features in new housing.</p>

Habitat One	Canada	Winnipeg, Manitoba	2009	http://www.awb-winnipeg.ca/index.php?option=com_content&view=article&id=60:habitat-one&catid=61:canada&Itemid=79	A design team including students, interns, and professionals worked toward creating well-designed visible housing solutions for lower income families in Winnipeg. The designs were presented to Habitat for consideration for construction in the spring of 2007.	Critical	Experimental	Visability
Architectural Drawing	US	Illinois	2009	http://www.bolingbrook.com/info/pdf/VisibilityExam1_09_09.pdf	AWB then invited students, staff, and instructors at the Faculty of Architecture to participate in a Habitat for Humanity building blitz. Volunteers built the first 'visible' Habitat house in Winnipeg. This shows a detail of a dropped foundation which allows for easier construction of a no-step entrance.	Critical	Implemented	Visability
Homes to be Wheelchair-friendly, Visible development one of few in Canada	Canada	Winnipeg, Manitoba	2010	http://www.winnipegfreepress.com/local/homes-to-be-wheelchair-friendly-96454349.html	This is an online news article stating that there will be a new neighbourhood being built in Winnipeg where a majority of the homes built will be wheelchair accessible (670/1225 homes). The planned neighbourhood is planned for Waverly West and it will be the first of its kind in Winnipeg. The plan is set to be put forward to city council in July 2010.	Critical	Implemented	Visability
The National Scene	Canada	Canada	2010	http://www.chba.ca/uploads/News/NatScene_June_2010.pdf	This is a monthly update published by the CHBA. There is a short paragraph on "Accessibility" and "barrier-free" design. It's as follows: "Accessibility" and "barrier-free" design was a prominent theme in both the Technical Research Committee and National Marketing Committee meetings held last month in Ottawa. It represents a growing market opportunity with approximately 4.4 million Canadians, or 1 in 7, having some form of disability. In another 20 years, it will be 1 in 5 as the population ages.	Critical	Experimental	Visability
Zero Step Sill Extruded Flush Threshold Door Seal System	US	Vista, California	2010	http://www.freepatentsonline.com/y2010/0064590.html	This is a US Patent from door manufacturers, La Carina Doors, Inc. (Vista, CA, US). It is an extruded door sill system that allows a door to have a zero-step threshold while maintaining a weather seal. The document includes description of the product and benefits, as well as detail drawings of the system.	Critical	Implemented	Visability
Mayor's Awards	Canada	Edmonton, Alberta	2010	http://www.edmonton.ca/residents/programs/2010-awards-for-persons-with-disabilities.aspx	The Mayor's Awards are designed to promote awareness of the need for accessibility, services and employment for individuals with disabilities. Presented annually, the Mayor's Awards recognize individuals, organizations or businesses within Edmonton that demonstrate a commitment to persons with disabilities. Four award categories recognize community members who demonstrate sensitive, creative and innovative methods to ensure the dignity and inclusion of persons with disabilities.	Critical	Awareness	Parallel Initiative
Larch Park Guidelines	Canada	Edmonton, Alberta	Current (2010)	http://www.larchguidelines.ca/visability.html	"Larch Park at Magrath" is a community in the southwest of Edmonton designed and moderated by Melcor Developments. They have set forth guidelines for construction that individual builders must conform to. Melcor developments has taken on the parallel initiative of sustainable homes and communities. In their building guidelines they stress the importance of visitability and state that all homes must have wider hallways and one bathroom on the main floor and they strongly advise having zero-step entries. For the zero-step entries they suggest the home-owner selecting the 'Capitol Modern' home design because it lends itself better to the zero-step entry. Based on an estimate from the community maps with the lot plans, there are approximately 138 single family homes that will be built to these requirements.	Critical	Implemented	Parallel Initiative
Bringing Universal Design Ideas to the Public: Interactive Exhibits in Southern California	US	California	1999	http://www.homemods.org/resources/pages/universaldesign.html	This journal article describes a great precedent where they rented retail space to set exhibits that demonstrated all facets of visitability and its importance. Precedent for starting one in Calgary.	High	Awareness	Visability

Measuring Up the North Phase 1 Final Report	Canada	British Columbia	2000	http://www.measureuphenorth.com/UserFiles/File/MUTNFinalReportLonG01-15-10LR.pdf	The Measuring Up The North Initiative began in 2007 in Northern British Columbia. Its goal is "to assist over 40 communities to become livable age-friendly, disability-friendly, universally designed, inclusive communities for all residents and visitors"... In creating more livable communities, this Initiative has promoted universal design, active living by design, sustainability, healthy communities, economic aspects, accessible tourism, visitable housing and many other concepts-intertwined. There has been seen a high rate of success already due to the fact that not only were all of these concepts brought together, as well, many organizations and partners were brought together, sometimes for the first time. In this Initiative.	High	Awareness	Parallel Initiative
New Affordable Housing Coming to Morden [Manitoba]	Canada	Morden, Manitoba	2005	http://www.cmhc.ca/en/comp/nero/nero/2005/2005-08-04-1200.cfm	This article outlines an affordable housing complex that was to be built in Morden, Manitoba with 30 units to be built to 'visitable' standards.	High	Implemented	Visiblity
Visiblity Think Tank	Canada	Winnipeg, Manitoba	2007	http://www.visiblityhousingcanada.com/holder3.html	A first national Visiblity Think Tank on Livable, Sustainable Housing and Communities was held by CCDS on May 11-13 2007 in Winnipeg, Manitoba. The event brought together over 60 key stakeholders such as seniors and disability organizations, policy makers, designers, homebuilders, community developers, real estate professionals, municipal officials, health care professionals and building code specialists. The Think Tank activities included presentations, discussion periods and site tours of visitable homes in Winnipeg. The goals of the Think Tank included learning about national and international trends, initiatives, successes and challenges; establishing links between visiblity, environmentally sustainable and affordable housing markets; and creating catalysts for change thus contributing to inclusive, sustainable communities that support all citizens	High	Awareness	Visiblity
Place Bertrand Housing Inc.	Canada	St. Boniface, Manitoba	2008	http://news.gov.mb.ca/news/index.html?archive=2008-5-01&item=3598	Place Bertrand was built under Manitoba's Homeworks! program. "Under HOMEWORKS!, the province is providing almost \$3 million in capital funding and rent supplements for 20 new housing units with a focus on access for people with disabilities, constructed through Place Bertrand Housing Inc., a non-profit housing corporation associated with Ten Ten Sinclair Inc.	High	Implemented	Parallel Initiative
Canadian Centre on Disability Studies Annual Report	Canada	Canada	2009	http://www.disabilitystudies.ca/Documents/Annual%20reports/Annual%20Report%20Final%20Version%20Sept%2009.doc	Built on land formerly owned by Manitoba Housing, the units will have mobility accessibility and incorporate universal design concepts in St. Boniface. Up to half of the units will receive rent supplement assistance to ensure they are affordable for low-income households including those on Employment and Income Assistance. "In keeping with Ten Ten Sinclair's values, we see Place Bertrand as a cluster of homes that are inclusive of all people – with and without disabilities," said Don Choiniechuk, past-chair of Ten Ten Sinclair Housing Inc. "We want to see and promote neighbourhoods that are inclusive of the diverse needs of our community. Place Bertrand will be a great example of that." This is an annual report outlining what the CCDS has accomplished within the year. It mentions Visiblity research initiatives, post secondary education in disability studies, media blitzes to advertise Visiblity and programs to further the education and awareness. The Greying Nation Conference	Canada	Alberta	2009	http://albertahealthservices.net/286.asp	The last conference was in 2009 and the topic was "Keeping Ahead of the Wave". It's not known when the next one will take place. The conference addressed how the health-care sector and service providers can prepare for the influx of seniors requiring services-the baby boomers, the first of whom will be turning 65 in 2011. Conference topics included: innovative technologies to support functional and cognitive abilities; adaptive housing; "green" living through the ages; determinants of health; aging well; and perspectives on aging as expressed through the visual and performing arts. The Greying Nation conference attracted a broad spectrum of delegates from public and private service providers and governing agencies, including physicians, allied health professionals, primary care providers, health care executives, researchers, administrators, educators and policy and decision makers.	High	Awareness	Parallel Initiative
Finstad Hageby	Norway	Northern Finstad	2010	http://www.bolig.skanska.no/sok-bolig/Projects/finstad/	Finstad Hageby, in Northern Finstad, Norway, is a residential area that will provide both the elderly and the young, regardless of their mobility, the same opportunities to thrive. In practice, this will entail around 260 blocks of flats having access without steps and with a lift, whereby all flats can be used regardless of whether the tenants are able-bodied or wheelchair users. Additionally, around 100 terraced houses and linked villas will be built with a life cycle standard. This means access without steps to the ground floor – and a design where both living rooms, kitchens and bathrooms are found at the entrance level and where bedrooms can also easily be accessed.	High	Implemented	Visiblity
HOMEWorks!	Canada	Manitoba	2010	http://www.gov.mb.ca/housing/homeworks.html	HomeWorks! is A Housing Strategy and Policy Framework for Manitoba. In 2009 \$5.4-million in funding was earmarked for HOMEWorks! for Manitobans with disabilities. This two-year federal-provincial initiative includes targeted construction of additional housing units and will focus on greater community living for people with intellectual disabilities; physical accessibility and housing that people with mobility restrictions can easily access (visitable housing).	High	Implemented	Parallel Initiative
Ryerson Commons	Canada	Cobourg, Ontario	2010	http://www.ryersoncommons.ca/default.asp	Ryerson Commons offers three home designs (The Victorian, The Sterling, The Burwash) that incorporate visitability criteria. Visiblity features are marked with green on the Floor Plans.	High	Implemented	Visiblity
The 2010 Livable Communities Awards (Submission Guidelines)	US	US	2010	http://www.nahb.org/generic.aspx?genericContentID=100422	When it comes to their homes, Americans of all ages want the same thing – a safe and comfortable home in a vibrant community. The Livable Communities Awards, co-sponsored by AARP and the National Association of Home Builders (NAHB), recognize builders, remodelers, developers, architects and planners who build and design homes and communities that improve everyday comfort, safety and personal independence. The deadline to enter the Livable Communities Awards is July 16, 2010.	High	Awareness	Parallel Initiative
BUILDEX Calgary / Edmonton	Canada	Calgary, Alberta	2010	http://www.buidexcalgary.com/ & http://www.buidexedmonton.com/	Re-branding BUILDEX, CONSTRUCT and DESIGN TRENDS under a single name. You can still expect the same great conference & tradeshow for the Property & Real Estate Management, Architecture & Interior Design, and Construction & Renovation industries — but with only one name: BUILDEX. There are opportunities to participate as an exhibitor, sponsor, speaker, attendee or any combination of these. BUILDEX will continue to host over 250 exhibits on the tradeshow floor and welcome more than 4000 regional industry professionals to take in both the exhibits and more than 40 industry leading educational seminars. Annual CHBA National Conference	Canada	Banff, Alberta	Annual	http://www.chba.ca/members-area/your-chba/national-conference.aspx	The Canadian Home Builders' Association is built on a vision and commitment - a vision of a strong and positive role for the housing industry, and a commitment to support the business success of our members and their ability to provide affordability, quality and choice for consumers. This conference is in its 68th year and is being held in Banff, Alberta. The theme for this year's conference is 'Inspire'. This conference doesn't appear to have an open, or public topic participation. In a June 2010 newsletter, the CHBA announced the development of a position paper on housing accessibility and visibility. It is on their radar as something to investigate and possibly create a 'best practices' guide. The CHBA could be contacted and partnerships can be made to promote Visibility within this conference. EcoLiving Fair	Canada	Alberta	Annual	http://www.ecolivingfair.ca/	The intent of the EcoLiving Fair is to give Albertans ideas and directions on how to reduce their impact on the environment by improving building / home efficiency and reducing the use of natural resources. Exhibitors ranged from CMHC and the Sierra Club to straw-bale wall construction and electric cars. Each exhibit provides a wealth of information for visitors to the Eco-Living Fair. If you are interested in eco-efficient appliances and construction or just want to see products and technology available in this area, the EcoLiving Fair is a one-stop shop! The Fair this year is over but there are always interesting things happening.	High	Awareness	Parallel Initiative
Olmstead vs. L. C.	US	Georgia	1999	http://laws.fndlaw.com/us/000/98-536.html	Respondents L. C. and E. W. are mentally retarded women. Both women were voluntarily admitted to Georgia Regional Hospital at Atlanta (GRH), where they were confined for treatment in a psychiatric unit. Although their treatment professionals eventually concluded that each of the women could be cared for appropriately in a community-based program, the women remained institutionalized at GRH. Seeking placement in community care, L. C. filed this suit against petitioner state officials (collectively, the State) under 42 U. S. C. §1983 and Title II. She alleged that the State violated Title II in failing to place her in a community-based program once her treating professionals determined that such placement was appropriate. The court rejected the State's argument that inadequate funding, not discrimination against L. C. and E. W. "by reason of their disabilities," accounted for their retention at GRH. Under Title II, the court concluded, unnecessary institutional segregation constitutes discrimination per se, which cannot be justified by a lack of funding. The court also rejected the State's defense that requiring immediate transfers in such cases would "fundamentally alter" the State's programs. The Eleventh Circuit affirmed the District Court's judgment, but remanded for reassessment of the State's cost-based defense. The District Court had left virtually no room for such a defense. The appeals court tightly limited circumstances. Accordingly, the Eleventh Circuit instructed the District Court to consider, as a key factor, whether the additional cost for treatment of L. C. and E. W. in community-based care would be unreasonable given the demands of the State's mental health budget.	Low	Awareness	Visiblity
Washburn v. Pima County, #2 CA-CV 2003-0107	US	Pima County	2003	http://www.apltwo.ct.state.az.us/Decisions/CV20030107.pdf	In this lawsuit, Washburn attempted to sue the Pima County for implementing the Visiblity Ordinance. They're argument that it was an 'unconstitutional' law and the county didn't have a right to implement it and to deny their building permit. The state overturned the appeal and ruled in the favor of the Pima County.	Low	Awareness	Visiblity

Winchester Homes: Your Home. Your Way	US	Washington, DC	Current (2010)	http://www.winchesterhomes.com/universal-design	At Winchester Homes™, we take great pride in every aspect of homebuilding. That doesn't just make us different from other builders; we believe it makes us better. More importantly, over 18,000 homeowners throughout metropolitan Washington, D.C. believe it makes us better, too. As the first large builder to earn the National Association of Home Builders' National Housing Quality award, we have established a standard of excellence unparalleled by any other luxury homebuilder. Our dedication to quality has been recognized by our customers and peers within the industry through many awards. They are a builder that informs their clients of the importance of Universal Design, and provides them with a checklist of features that could be added to the home they want to build. These are four designs that "epitomized the FlexHousing ideals." With a short description, there is an elevation and plan drawings.	Low	Implemented	Visiblity
Flexhousing Award Winning Designs	Canada	Canada	1996	http://www.cmhc.ca/en/co/buho/flho/flho_014.cfm	Darwin Court was designed by architects Jestico and Whiles for Peabody, specifically to respond to the changing needs of local community groups and older people. It was essential that all flats could be easily converted if/when the future needs of the tenant changed. It was also crucial that the flats be designed with both non-disabled and disabled tenants in mind. For this reason, Darwin Court was designed to Lifetime Homes standards, which provides the design features necessary to meet the brief.	Moderate	Experimental	Parallel Initiative
Darwin Court, UK	UK	London	2003	http://www.lifetimehomes.org.uk/pages/darwin-court-london-.html	Proper planning ensured that there was minimal difference between the actual cost of building Darwin Court to Lifetime Homes standards and the cost that would have been incurred building to more conventional standards.	Moderate	Implemented	Parallel Initiative
Castle and Keep [Murray Siple House]	Canada	North Vancouver	2004	http://www.canadianarchitecture.com/issues/story.aspx?aid=1000141816&type=Prim%20Archives	The Murray Siple house is a home in North Vancouver that was renovated to meet the clients needs of being bound to a wheelchair. The home design is based on Universal Design, not just Visiblity. It has large corridors and spaces, no change in levels and zero-step entries. The design is simple, beautiful and modern. It is a good precedent for what can be done for retro-fits.	Moderate	Implemented	Parallel Initiative
Human Rights Commission Reaches Accessibility Settlement with Mattamy Homes	Canada	Ontario	2005	http://www.ohrc.on.ca/en/resources/news/NewsRelease/2006-05-19_4856708283/view	A home buyer settles a case with Mattamy Homes whom, at first requested the home buyer to first buy the home before even consulting with a design consultant for making the home accessible, when there could be no assurance in the level of accessibility. The matter was resolved positively including new company policies.	Moderate	Awareness	Parallel Initiative
Sustainable Home Brisbane	Australia	Brisbane	2006	http://www.sustainablehomebrisbane.com.au/index.htm	Through the Sustainable Homes Program, Government and industry have partnered to build a number of sustainable houses throughout Queensland. The Brisbane Sustainable Home is a two-level home, set on a gently sloping site, contains four bedrooms and three bathrooms. An elevated walkway from the street enables easy access to the primary, upper living level.	Moderate	Experimental	Parallel Initiative
Housing in Response to the Human Life Span	US	Seattle, Washington	2007	http://www.zai-inc.us/pubs/ultimatehomedesign.pdf	This house was a design winner for the 2009 Livable Communities Awards that was Co-sponsored by AARP and the National Association of Home Builders (NAHB). This article gives more information about the project, including floorplans. It is an example of universal design and designing a home for aging in place. There are numerous features in addition to the visiblity requirements, for example, an elevator shaft currently used as storage, removable lower bathroom cabinets for wheelchair access, and lower kitchen counters. As well, the life cycle design accounts for the families changing needs, the lower floor is currently used as a home office and can be converted easily into a granny suite for rental opportunities or care staff when needed. Portland Courtyard Housing Competition	US	Portland, Oregon	2007	http://www.courtyardhousing.org/	In 2007, the City of Portland invited architects from around the world to share ideas on the design possibilities of housing oriented to shared courtyards. Portland is promoting courtyard housing as an additional infill housing type that can provide a quality living environment at densities higher than conventional detached housing. This competition is part of a multi-pronged effort by the City of Portland to retain families with children in the city's neighborhoods in the face of increasingly unaffordable conventional detached housing. This competition will be a key opportunity to explore how courtyard housing may help fill the need for new housing for families with children, as well as provide desirable options for other types of households. Smart & Sustainable Homes Program	Australia	State of Queensland	2008	http://www.sustainable-homes.org.au/	The Sustainable Homes program is providing communities throughout Queensland with display homes which incorporate principles of sustainable design and performance utilising the Smart & Sustainable Homes Design Objectives. The homes are unique because they provide practical examples within their regional climatic context of dwellings that aim to meet the triple bottom line concept of sustainability i.e. environmental, social and economic sustainability. Visiblity criteria were part of each home design.	Moderate	Experimental	Parallel Initiative
Mind the Gap	Canada	Edmonton	2008	UofC: [0008-2872]	"There is a continued dearth of knowledge surrounding the concept of visiblity. The building industry most often likes to keep repeating the construction processes it is familiar with, and general contractors do not like to train subtrades on unfamiliar construction methods unless they see immediate, short-term financial benefit. Architects and other designers are often motivated in the same way unless they are paid specifically to research a concept of visiblity. Organizations and individual homeowners are also reluctant to pay for such research by architects and other designers. Most research then is conducted through government-funded grants. Governments at all levels are generally reluctant to enforce too much legislation on the development and building industry. Currently, there is no legislation specifically addressing visiblity in Canada. Only government-funded public buildings require universal and adaptable features to benefit persons with disabilities, but the single-family home is not part of this legislation. Sweden first started using the term visiblity in 1976. The concept slowly filtered throughout the rest of Europe, the United Kingdom (Lifetime Homes), Japan, Australia (Smart Housing), the United States and finally Canada. Research shows that the majority of visiblity housing has been built with financial assistance from one or more levels of government."	Moderate	Implemented	Parallel Initiative
2008 Housing Awards Winning Best Practices In Affordable Housing - Flora Place	Canada	Manitoba	2008	http://www.cmhc-schl.gc.ca/en/npr/graw/hoawpr/upload/Flora-Place.pdf	In collaboration with Ten Ten Sinclair Inc, this project provides housing for families with accessibility needs. The 28 visiblity units, of which 4 are fully accessible, are built with slab on grade foundation, 36 inch doorways, barrier-free bathrooms and a no step entrance.	Moderate	Implemented	Visiblity
Bridgeton Neighborhood Revitalization [HOPE IV Grant Recipient]	US	Bridgeton, New Jersey	2008	http://www.designadv/sor.org/green/bridgeton.htm	From 2003 to 2008, 267 homes — single family detached and twin units — were constructed in five phases. Located in the largest historic preservation district in the state, the new buildings feature architecture that is contextually sensitive in mass, scale and detail. They all include porches and patios; front, back and side yards — landscaped and with fencing, and off-street parking spaces. Surrounding the homes are new streets, sidewalks, street trees and streetscaping. The project received a 2009 American Institute of Architects/Housing and Urban Development Secretary's Award for Housing and Community Excellence in Affordable Housing Design for its unique area redevelopment plan and the integration of architectural design. The project contains a portion of visiblity and accessible housing. They adapted the vernacular of Victorian design to allow for zero-step entries. They used a variety of housing types mixing visiblity lower units with upper non accessible units to maintain the tall, verticality of the Victorian homes.	Moderate	Implemented	Visiblity

Alberta Association, Canadian Institute of Planners (AACIP) Conference	Canada	Alberta	Annual	http://www.aacip.com/public/conferences.html	We face a complex web of economic, social, cultural and environmental challenges in our communities. We feel unsettled and overwhelmed yet we are also energized by a sense of possibility and future. We endeavour to make a difference. In a world that is constantly changing, building resilient people and resilient communities is vital. We are inventive, resourceful, creative, skilful and clever people who notice what is happening in our communities. We strive for purposeful decision-making and action. We see a better way to create our future together. We gather to draw on our diversity of perspectives, as professional planners, aspiring planners, community leaders, developers, builders, other community and development professions, and non-governmental organizations: anyone who works or volunteers for change in our communities. We are designing a conference experience with this assumption in mind: collectively we have the solutions -- we need to surface them and determine concretely how to act on them. Hanham Hall - Zero Carbon Village	UK	Bristol	Current (2010)	http://www.hanhamhall.co.uk/site/web/home	Barratt Homes and the Homes and Communities Agency are creating England's first zero carbon development. This will be the first development by a major housebuilder to meet the Code for Sustainable Homes Level 6, which includes Lifetime Homes standards. Hanham Hall, a former hospital site owned by the Homes and Communities Agency, the national housing and regeneration agency, is part of the Carbon Challenge, a government programme that intends to create a number of zero carbon housing developments across the country. The development will deliver 185 new homes in an attractive and sustainable environment and also includes the total refurbishment of Hanham Hall itself to feature offices, creche and a café. The homes will be set in 12 acres of open space and will provide a mix of properties for first time buyers and families with the first homes set for completion towards the end of 2010. Freedom (Universal Home)	US	Tampa Bay, Florida	Current (2010)	http://www.newmilhomes.com/index.cfm?method=Models.ModelDetail&ModelID=10	This home was the winner of the 2008 AARP + NAHB Livable Communities Awards. The developer sells this as the universal home because it is compliant with most ADA and FHAA requirements. The architectural features in this design are wider hallways, zero-step entry, a roll-in shower and a turning area in the hallway. Although this is the only home of the developer aimed at universal design, it appears that each of the other designs available through them could be modified as the homeowner would wish. They market themselves as specialists for special needs home adaptations and renovations.	Moderate	Awareness	Parallel Initiative
Universal Design Case Study Collection	Worldwide	Worldwide	Current (2010)	http://www.dev.ihcdstore.org/	This website hosts an international collection of Universal Design case studies of the built environment designed to appeal to a global audience of design practitioners, educators, students and other built-environment project stakeholders ranging from individuals to governments. This project seeks to explore the current "best practices" in Universal Design in the built environment and make this information freely available for individuals planning projects in the built environment. This resource will enable quick and easy access to state-of-the-art case studies of Universal Design in the built environment that illustrate good examples for a diverse audience. With the case studies available anywhere anytime, someone planning to build a new school or health center or to renovate an historic cultural facility would readily access information about inclusively designed precedents. Consort Road, London, UK	UK	London	2010	http://www.waltermenteth.co.uk/CONSORT01.html	Consort Road is a new development within the Peckham regeneration zone in Southwark, London. The Scheme is built to Lifetime Homes standards and incorporates numerous environmentally sensitive features to compliment its position in a high density, urban area. Walter Menteth Architects were commissioned by Presentation Housing Group in 2003 to design 49 low cost dwellings on a brownfield site in Peckham's regeneration area. There is a main road, a railway viaduct and terraced housing surrounding the development which presented a series of challenges to the project's design. Consort Road was completed in 2007.	UK, Lifetime Home, New Build, Precedent, Multi-family	UK, Lifetime Home, New Build, Precedent, Multi-family	Parallel Initiative
					Consort Road consists of 3 distinct blocks; a six storey shared ownership apartment building, links via a terrace of family houses with a corner of rental apartments, all to Lifetime Homes standards to ensure a provision for future adaptation and change.			
					It is a highly sustainable design with a number of construction and performance innovations, including sheltered landscaped areas to the rear of the development, 39 winter gardens in a sequence of bays and buttresses for use by residents whose individual stamp completes the design through their use of the space, a double pavement along Consort Road, a large curtain wall to the rail viaduct, and use of glazing to establish a clean, clear urban presence.
